# Four votes may hold key to oil-tax delay

By Godfrey Sperling Jr. and Peter Stnart Staff correspondents of .

The Christian Science Monitor Washington.

prices paid by Americans rise an estimated 10 cents per gallon may depend on the votes of four senators.

That's how many votes President Ford is believed to need to sustain his veto of Congress' 90-day post-ponement of his hike in imported oil

The Senate joined the House of Representatives in voting the delay Wednesday 66-28 - more than the two-thirds majority required to override a veto and, computing absentees, leaving the President the task of switching four votes.

To do so, he may have to compromise. Two Republican Senators in touch with the White House on the issue, Jacob Javits of New York and Robert Packwood of Oregon, hint one possible concession: shifting the tariff burden heavily on gasoline and more

lightly on heating oil. Such a concession, to which the President is known to be receptive, could inflate the rise in gasolone prices to 12 or 14 cents per gallon but deflate the hike in heating oil prices to 6 or 8 cents per gallon.

It also could win Mr. Ford the support of six Republican Senators (mostly from the heating-oil-dependent Northeast) who backed an unsuccessful amendment along these lines, then voted for postponement. If he does, he could make his veto stick.

The House of Representatives, which ratified the delay, 309-114, is regarded as certain to override.

It is becoming increasingly clear in this battle over these proposals that Mr. Ford sticks stubbornly to his : : One of Mr. Ford's long-time associ-

that he feels he is giving up his principle. Instead, he may well opt to take the defeat in Congress - putting the burden on Congress to come up with a better alternative or take the rap from public opinion."

### Pattern of diplomacy

# How new era affects U.S. ties

In terms of U.S. relations with other powers, we are in a new era. We do not yet have a label for it. But we can begin to identify it — if only in terms of what it is not, or what it does not

It does not have an automatic NATO alliance.

It does not have Washington even going through the motions of consulting its NATO allies before doing diplomatic business with the Rus-

It does not have clients economically as well as militarily dependent

on the United States. It does not have a forward American foreign policy "leaning against" the frontiers and outposts of commu-

In it the United States can no longer discipline client states such as Greece and Turkey. The United States may well be losing its ability to enjoy the use at will of the military facilities of Portugal and Spain.

### Greek, Turkish issue

There is still a NATO alliance, yes. But how does it operate now? And how will it be operating five or ten years from now?

The immediate issue is the relationship of Greece and Turkey to the alliance. The Greeks, deeply disappointed over American failure to restrain the Turks on Cyprus, are cool toward Washington, and may grow cooler. The Turks, their pride bristling over the attempt by Congress to coerce them by withholding American military aid, are talking about closing down American military bases in Turkey.

The American Sixth Fleet is still the most powęrful military weapon in Europe and can still keep to the seas. In a test of strength it could still dominate the Mediterranean. Yet the "Med" is no longer America's mare nostrum. The Soviets ride its waves freely. And Washington is no longer in sure control of the passages in and out of the world's most important inland

which bestrides the Dardanelles. And while the Strait of Gibraltar is still controlled by Spain and the Govern-

associated with the Pentagon, that condition is on shaky foundations. Political disintegration is possible in Spain even now and seems all but certain when Gen. Francisco Franco no longer holds down the lid on change.

Also, Morocco is making a determined drive for control over the southern flank of the Strait of Gibral-\*Please turn to Page 4

### U.S., Soviets eye trade wreckage

By Harry B. Ellis Staff correspondent of The Christian Science Monitor

Washington American and Soviet trade experts, meeting in Washington, are trying to salvage what they can from the wreckage of the U.S.-

Soviet trade agreement. That agreement, it had been hoped, would give fresh impetus to Soviet-American commerce, which ballooned fivefold in recent years to a \$1 billion annual level.

Crux of future growth is credits. with which the U.S.S.R. - embarked on long-term industrialization of vast Siberian reaches might purchase U.S. machinery, tools, and know-how.

Soviet officials, according to assistant U.S. Treasury Secretary Gerald L. Parsky, just back from Moscow, say "they will have to be looking elsewhere for credits," now that the 1972 U.S.-Soviet trade agreement has been scrapped.

Moscow canceled the agreement when Congress limited Export-Import Bank credit to the U.S.S.R. to \$300 million over the next four years and linked trade benefits to Soviet Jewish emigra-

A high-level Soviet delegation, headed by Deputy Foreign Trade Minister Vladimir S. Alkhimov, is in Washington for talks with prominent American busin men. Earlier, an official U.S. Government delegation, chaired by Mr. Parsky, was in

### Whether gasoline and heating oil ates says: Ironically, Washington's relations ''Jerry won't compromise so much with Egypt — which controls the Suez Canal (soon to be reopened) - are better right now than with Turkey,

### Oil alut forcing some minor price cuts But most producers simply turn off flow

By a staff correspondent of The Christian Science Monitor

The net cost of oil is coming down in some cases as supertankers wait in the Atlantic off the Canary Islands or Land's End for instructions as to which European port is least awash in

The reason for costs coming down is that some smaller oil-producing countries have reduced the special premiums they charge for the high quality of their crude or their proxim-

ity to European markets. Now with oil plentiful and tanker rates at all-time lows, consumers do not want to pay these premiums.

The reductions being offered by Abu Dhabi, Libya, and some other African producers are in the range of 30 to 60 cents a barrel. But the

cheaper oil is going, not to the major oil companies, but to third-party customers who buy direct from state oil companies instead of dealing with

TAPLINE

OPEC still firm

the majors.

Analysts warn that the major producers — Saudi Arabia, Iran, and Kuwait - are yet to be heard from, and suggest it is futile to expect an imminent break in the hitherto solid price front of the Organization of Petroleum Exporting Countries

"I would welcome lower oil prices, but I don't believe they are going to come down," Sir Derek Ezra, chairman of Britain's National Coal Board, said in an interview. He added that if he were an oil producer, he would see no reason to bring prices down rather, "I'd turn the tap off."

By Joan Forbes, staff cartographer

And the tap has been turned off for at least six months - on one of the two major pipelines from the Arab Middle East to the Mediterranean. A spokesman for Tapline, the 1,000-

mile duct from Saudi Arabia through \*Please turn to Page 4

## Jane Fonda speaks frankly in Moscow

Substantial savings

By Dev Murarka Special to The Christian Science Monitor

Jane Fonda, the political activist actress, is in the Soviet Union making a film. And those who have been following her career are watching to see how she will react to her stay

Miss Fonda is taking part in the first Soviet-American co-production of a film based on the classic tale by Maurice Maeterlinck 'The Blue Bird." She plays the princess of night.

Most encounters between radical chics and life as it is in the Soviet Union have been mutually bruising because free-wheeling radicalism makes the Soviets uncomfortable. They are bewildered by non-conformist behavior amidst them, though it is admired from a distance.

Jane Fonda: 'anti-star'

For the time being, however, Miss Fonda's views, as she explained them in an interview published Feb. 19 in the Literaturnaya Gazeta, fit in with the Soviet perceptions on such mat-

# Politics jars Mideast efforts

### Kissinger feels Congress adds to his difficulties

By Dana Adams Schmidt Staff correspondent of The Christian Science Monitor

### Washington

Henry Kissinger is back from the Middle East and Europe with the outlines of a possible interim settlement between Egypt and Israel in his pocket. But he is, for all his humor and bounce, a profoundly worried

Dr. Kissinger knows that the interim solution he wants when he goes back to the Middle East in mid-March is a fragile vessel that may yet run aground and break up on the shoals of Middle Eastern or U.S. congressional

In his reports to the President and to congressional leaders he is, furthermore, describing what appears to him to be a crisis in American foreign policy. He is telling them that this crisis has been brought about by the changed complexion of Congress, now dominated by aggressive young Democrats, who have swept aside the traditional leadership and who, he says, consider it their right to interfere in, or even to make American foreign policy.

One of the first fruits of such interference he sees as the breakdown of the trade agreement with the Soviet Union as a result of a congressional effort to tie most-favored-nation

### treatment and credits to more free emigration of Jews in the Soviet

Turkish aid cutoff This effort cost the U.S. the trade agreement, which the Russians have all but denounced, and have held in abeyance. At the same time, Jewish emigration has fallen to its lowest level. So Dr. Kissinger tells the congressmen that if they want to help the Jews of the Soviet Union they must disavow Sen. Henry Jackson's rhetoric and let him do it the Kissinger way, by quiet understandings, without public declarations that em-

barrass the Russians. Another of the bitter fruits, in the Secretary's view, is the collapse of American policy in Cyprus where the Turks have proclaimed a federated republic which the U.S. and the Greeks will not recognize. While Dr.

Kissinger if pressed may admit that he may have misjudged the Cyprus situation at some stages, because he was so preoccupied with the change of administrations in Washington, he blames above all the "Brademases." the pro-Greek lobby which includes Rep. John Brademas (D) of Indiana, and which, he says, obstinately overlooked what he was working out by quiet diplomacy and, as in the case of the Soviet trade bill, embarrassed the Turks with a publicly declared cutoff of military aid.

As a result, Dr. Kissinger fears the U.S. may lose 15 extremely important electronic listening posts on Turkish soil, and air bases, while Turkey will be pushed toward the ranks of the unaligned nations and into cooperation with the Arabs against Israel. -.

The outline of what may become an interim agreement of the Middle East looks something like this:

Israel would have to give up the Mitla and Giddi mountain passes in Sinai and the Abu Rudeis oil field, and Egypt would in return make a public statement that was more a promise not to attack first than the declaration of nonbelligerence Israel originally

### Practical concessions

In addition, the Egyptians will probably make some practical concessions which have not yet been worked out. These could take the form of allowing third-country aircraft to fly between Cairo and Jerusalem, allowing Israeli cargo in third-country ships through Suez, and perhaps a relaxation of economic and psychological warfare.

To make this agreement possible the U.S. will probably have to guarantee Israel's future oil supply, to which end Dr. Kissinger has been talking to the Shah of Iran in Zurich. A military guarantee that would probably go into effect with a final settlement is also under study by experts in Washington. The problems in working out the latter are just what would be expected of the United States, who would recognize the guarantee, and how it would be declared.

There were signs in the Middle East that both Egypt and Israel were talking in more reasonable tones than usual following Dr. Kissinger's visit. The Israelis have dropped their nonbelligerency demand with its farreaching legal implications which are tantamount to peace, and Gen. More decai Gur of Israel has conceded that the problems are "less the geographical passes than the political passes."

# Democracy shelved in Pakistan

Opposition party is banned after murder of key Bhutto backer

> By Geoffrey Godsell Overseas news editor of The Christian Science Monitor

Parliamentary democracy in Pakistan once again has: had to yield to Prime Minister Zulfikar Ali Bhutto's determination to hold the country together in one piece at all costs — in the way he thinks best.

Since the beginning of the month, he has banned the main opposition party in Pakistan, the National Awami Party (NAP), and put its leaders in prison. Those in jail include Khan Abdul Wali Khan, the NAP president.

Mr. Bhutto ordered these drastic steps after flying home from foreign travel (that included Washington) on hearing of the assassination in Peshawar Feb. 8 of Hayat Muhammad Sherpao. Mr. Sherpao was Home Minister in the provincial government of North-West Frontier Province and a strong supporter of Mr. Bhutto. He had been called the Prime Minister's "hatchet man" in the province.

### Ban lifted

On getting back to Pakistan, Mr. Bhutto described the threat to Pakistan as greater than that posed by the India-supported breakaway of Bangladesh (then East Pakistan) in 1971.

Mr. Bhutto took over the government in Pakistan after the loss of Bangiadesh, and clearly his aim ever since has been to hold what was left of the country together. On assuming power, he committed himself to reintroducing parliamentary democPAKISTAN INDIA

By Joan Forbes, staff cartographer The provinces of Pakistan

racy and as an earnest of his good faith lifted the political ban then in effect on the NAP.

Central governments, which are usually Punjabi-dominated, long have been suspicious of the NAP. This is because the party draws its main strength from the North-West Frontier Province (NWFP) and Baluchistan. And central governments suspect that the Pathans of NWFP and the Baluchis of Baluchistan would like the break away from Pakistan.

Pakistani officials have charged intermittently over the past quarter of a century that Afghanistan encourages the Pushtu-speaking people of the NWFP to set up an independent Pakhtunistan. (Afghanistan itself is mainly Pushtu-speaking.) And indeed since the murder of Mr. Sherpao, Mr. Bhutto's Home Minister publicly has

charged Afghanistan with being behind it.

Adding to Pakistani concern is the suspicion, justified or not, that India eggs Afghanistan on. A widespread Pakistani belief is that India has never given up its desire (as Pakistanis see it) to bring about dissolution of Pakistan so that India remains unchallenged and unimpeded on the subcontinent.

In Baluchistan there has been antigovernment guerrilla activity for two years. Early in 1973, a cache of Soviet. made weapons was found in the Irani Embassy in the Pakistani capital Islamabad. These reportedly were intended for delivery to the Baluchi guerrillas. The discovery of these weapons was the cue for Mr. Bhutto to dismiss the NAP-led provincial gov: ernment in Baluchistan and install his

### Sinister thread?

In Mr. Bhutto's eyes, then, the NAP apparently has become synonymous with a threat to the unity of Pakistan In a sinister thread behind it, he suspects Afghanistan; behind Afghanistan, India; behind India, India's friend, the Soviet Union; and then, as a client of the Soviet Union, Iraq, in whose embassy in Islamabad Soviet. made weapons were found. (Pakistan tries to balance India's ties with the Soviets by having warm relations with China.)

Hence the banning of the NAP. But this seems to have brought Parliament to a standstill. All opposition parties have said they will boycott the legislature because of the emergency powers assumed by the government - and its sessions have been adjourned indefinitely.

# **South-West Africa vote** brought more to polls

By Henry S. Hayward Staff correspondent of The Christian Science Monitor

Windhoek, South-West Africa How significant a victory the South African government won in January's election in Ovamboland, the barren black homeland of \$40,000 Ovambo tribesmen in the northern part of South-West Africa, is still a matter for comment here.

South-West Africa is called Namibia by the United Nations. After World War I this former German colony was placed under a League of Nations mandate administered by South Africa. The mandate was terminated by the UN in 1966, but South Africa has refused to relinquish control of the territory.

Since Ovambos make up nearly half of Namibia's small population, what happens in their homeland is important for the rest of the territory.

In a 1973 election the South African Government received a humiliating setback when a boycott led to fewer than 3 percent of eligible Ovambos

This time the government plainly was determined to ensure better results. It clamped down hard on the South-West Africa Peoples' Organization (SWAPO), a national black political group which opposed the holding

of both elections. The turnout at the ballot boxes in January was estimated at about 55 percent, statistically a very large

increase.

**NEVER DRY CLEAN OR** 

The result therefore was widely heralded in southern Africa as a victory for the government and a severe setback for black-led SWAPO. The reasons behind this shift, how-

ever, offer a significant insight into the political atmosphere in Namibia.

Tribal voting opposed SWAPO is opposed to elections on an ethnic or tribal basis, as was the Ovamboland balloting. It feels this is producing mini-states on a geographic-ethnic basis instead of a sense of national political unity, as SWAPO savocates.

First of three articles on South-West

### Continued from Page 1

get rid of them without harming people who are really unfortunate," he said. "It's like the legal system: How can you protect the innocent without letting some guilty ones go?"

All the women, however, vigorously. defended Mrs. Thatcher's comment that she was for the "workers, not the shirkers." There are just "too many scroungers around," they said unanimously.

They would perhaps be pleased to know that, as Mrs. Thatcher was being installed formally as leader of the Conservative Party Feb. 20, a Gallup poll commissioned by the Daily Telegraph showed that since her election nine days earlier, the Conservatives have forged four percentage points ahead of the Labour Party, whereas last month Labour led the Conservatives by 14½ points.

Elections are not won by public opinion polls, and Mrs. Thatcher has a leader capable of tackling Britain's enormous economic and social prob-

### Comfortable distance

For instance, government figures released Feb. 20 showed that unemployment had zoomed by 138,000 since November to stand at just under 800,000. That is a comfortable distance still from the psychologically damaging 1 million figure. But as in the United States, car rempanies are in serious trouble, and dealers' lots overflow with unsold cars.

The miners are pleased with the 30percent pay rises they won last week, but other large unions have wage negotiations still to come. Railway signalmen struck again Feb. 20 throwing most of Britain's rail services into complete chaos.

In foreign affairs, meanwhile, an area in which she previously had shown little interest, the new Conservative leader has moved rapidly to establish contact with Britain's major friends and customers. She has breakfasted with U.S. Secretary of State Henry A. Kissinger and sent Lord Carrington, former defense secretary, on a tour of Middle Eastern countries with a personal message from her.

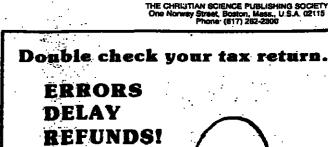

### Excellent relations

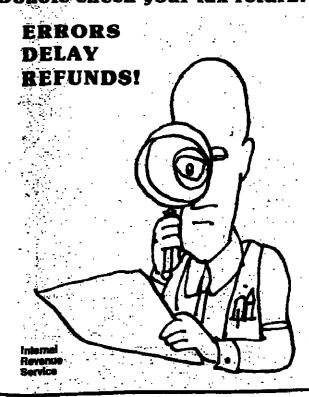

Her choice of Sir Geoffrey Howe to be shadow Chancellor of the Exchequer showed her concern to balance her own right-wing image with more liberal views. And her selection of veteran politician Reginald Maudling as shadow Foreign Secretary is seen as an attempt to redress the pro-Jewish image projected by her own background as representative of the London suburb of Finchley.

ling has spent on the back benches, he is said to have cultivated excellent relations with Middle East represen-

# Colleges, pros rap gambling

'Czars' line up to testify against move to legalize sports betting

By George Moneyhun Staff correspondent of The Christian Science Monitor

Washington The men who direct collegiate exist in the U.S. now join those in arge of professional sports in conmning legalized gambling on all

" In two days of testimony before the tional Gambling Commission here, e country's leading sports officials inced no words in voicing their prehension about current proposals institute sports betting as a means raising revenue for financially rd-pressed state governments. They pledged to fight the moves in

e courts if necessary.

ollegiate voices Speaking for collegiate sports hursday, Robert C. James, commisoner of the Atlantic Coast Conferice, called for "more stringent law iforcement and prosecution degned to combat the pernicious innence which experience shows gambling exerts on athletes and athletic competition."

He recommeded enactment of laws that would make interstate gambling on sports a criminal offense.

Mr. James warned that legalized betting would be impossible to police on college campuses and would inevi-

tably lead to attempts to "fix" games. In the face of mounting pressure to legalize betting on team sports, the. commissioners of football, baseball, basketball, and hockey had warned that government-promoted gambling could undermine public confidence in sports, shift the emphasis of fans from competition and skills to money and greed, and most likely destroy athletic competition as it exists today.

New York proponent

New York's off-track betting (OTB) chief, Paul R. Screvane argued in written testimony that legalized sports betting was inevitable, and he urged the gambling commission not to recommend that Congress pass legislation that would prohibit individual states from making their own decisions regarding state-run sports

Mr. Screvane pointed out that in less than four years New York's OTB Corporation has become the largest retailer in New York City and in fiscal year 1974 provided city and state government with \$60 million in sup-

Also on Thursday, George Killian, executive director of the National Junior College Athletic Association was to support Mr. James's position.

Rozelle's warning

National Football League Commissioner Pete Rozelle told the 15-member congressional commission his major concern was the public suspicion, that would grow out of betting, that players and coaches might "fix" games or "shave points" or give less than their "all" at crucial moments in contests.

"Illegal gambling today is a negative influence on professional football," he said, explaining that considerable money and effort are involved in policing games, "running down rumors," and checking out complaints.

Baseball Commissioner Bowie K. Kunn said the "government sanction" of legalized gambling would entice millions of sports fans who have not gambled previously into wagering, he said, adding that many youngsters would be lired into the betting parlors, too.

Anti-betting arguments

Other arguments put forward in opposition to state-run sports betting: the "creating of a climate favorable to gambling" that would lead to more addictive gamblers; an increase in illegal gambling which would feed off the legal betting; a drop in attendance at games by families disgusted with the gambling climate; attempts at bribery to get "inside information" on players and games; the inadequacy of government-run betting shops to compete with illegal bookmakers, whose winnings are not taxed and who offer credit, as well as harsh collection

The sports commissioners received support from an unexpected source. former long-time gambler and casino operator Jimmie (the Greek) Snyder, who is known for setting betting odds nationwide. Although conceding that bis income would "probably triple" if gambling were legalized, Mr. Snyder said he "strongly opposed" it because 'it wouldn't produce enough reve nue" for the government to be worth

He estimated "less than \$300 million a year" would be grossed nationwide, with government receiving 5 next year - if the economy continues to deteriorate.

Washington

Asserting that he does not see "a consistent willingness" on the part of Mr. Evans said he was "supportthe President "to bring others into decisionmaking," veteran Republican Gov. Daniel J. Evans of Washington State is emerging as a leading economy would be getting better. critic of Mr. Ford in the moderateliberal wing of his party.

Insensitivity to human needs criticized

The former head of the National Governors' Conference, appearing before a group of reporters at breakfast here, also made it clear that he thought the President made a major mistake in not being more sensitive to human needs in his budget and economic-energy proposals.

The Governor said he foresaw the possibility that someone 'better

suited to the times" might be the Republican presidential candidate

Points for courage

Evans assails Ford's decisions

ing" the President "as of now" and gave him points for "the courage to make unpopular decisions." Further, he said he had expectations that the

But if economic conditions do continue to erode, the Governor said, "I would hope the President would recognize this and step down." But if he doesn't, Mr. Evans said: "I would not march in support of a rump movement to dump the President.

Asked if he thought if the President decided not to run because of the economy the Vice-President would have to step aside, too, the Governor answered: "No, I don't think that this would apply to Rockefeller, too."

Domestic action praised

Here the Governor praised the President for putting his Vice-President in charge of his Domestic Council. "Nelson Rockefeller," he said, "will have huge respect from his colleagues among the governors as well as among mayors and other top officials. His appointment is a signal that the President intends to make something of the Domestic Council.

Mr. Evans said he and other governors were in on the early discussions on the federal budget. "But then," he said, "there was a major shift in the President's view on how the budget was to be put together - with heavy emphasis on dealing with the economy - and we were not consulted."

# 'an Am asks to slash Caribbean air service

By James Nelson Goodsell Latin America correspondent of The Christian Science Monitor

A basic realignment of United tates air service in the Caribbean is

a the offing. This became more apparent as Pan merican World Airways this week etitioned the Civil Aeronautics oard to end service from the United - tates Northeast to Puerto Rico and ie Virgin Islands, as well as to other - cints.

The Pan Am petition, placed before he CAB Thursday, would benefit both imerican Airlines, now the leader in much of this service, and Eastern

If approved by the CAB, as airline ircles believe it will be, Pan Am rould be left with only a scattering of outes in an area it ploneered and mce dominated

### Earlier actions followed

Moreover, Pan Am's desire to end s Caribbean service, due to evere revenue losses, comes on op

• A route-swapping proposal beween Pan Am and American which rould give American the Pan Am outes to Barbados, the Dominican lepublic, and Bermuda in return for xclusive rights to Hawaiian and with Pacific service now held jointly y Pan Am and American.

**Just wind it** 

and enjoy an

shave!

NO WIRES! - NO ELECTRICITY! NO BATTERIES! • NO LATHER!

NO BOTHER! - NO WAITING!

Now you can enjoy the same rugged, dependable shaver our astronauts used on moon mission flights. The shaver that doesn't ruquire electric power, water or weight and space-wasting accessories! Just check off our checklist below, and you'll quickly discover why no other electric shaver or blade razor can match the Monaco space age shaver for performance, convenience, reliability, value! Usique Wind-Up Spring. Monaco is the only shaver that doesn't depend on an outside energy source. It's powered by a rugged, dependable wind-up spring. Which makes it—and you—very independent. Just give the winding key air or seven turns and you have emough power for a perfect shave. Use it Anywhere. You can use Monaco whenever you are—even if that's deep in the woods or a fighing trip. And every day at home and work; in the office, in the ear! Or when you're flying or riding to an important meeting and want to get rid of that "5 o'clock shadow."
Clean, Confortable Shave. You never have to worry shout nicks and scratches with this shaver. The

to get hid of that "5 o'clock shadow."

Clean, Comfortable Shave. You never have to worry about nicks and scratches with this shaver. The super-thin shawing head floats gently over your face, guiding whakers into thousands of tiny perforations. Surgical steel blades revolve an amazing 72,000 times per numbe, shicing your whiskers off smoothly at the skin line. Without the hacking and chopping of officers of showers of since showers.

Reliability. Monaco is made to run like clockwork — year after year! The reason? It's carefully crafted by skilled Swiss watchmakers!

• Pan American's earlier withdrawal from New York-Antigua service, which Eastern is temporarily servicing.

Pan Am's petition to the CAB specifically calls for an end to its service to Puerto Rico out of New York, Baltimore, Boston, and Philadelphia; Virgin Islands, Martinique, and Guadeloupe service out of New York; and New Orleans-Merida, Mexico, service.

The financially troubled Pan Am blamed heavy operating losses for its request to end these services. It said that in the year ending Sept. 3, 1974, losses on these routes amounted to \$23,453,000 — with mor than \$10 million of this figure from the Puerto Rico service.

### Feeder service lacking

In its petition, Pan Am pointedly noted that one of its problems is a lack of domestic routes to feed into its service from New York to the Caribbean. Airline circles say that one of the reasons that American has done o well on its New York-Caribbean routes is its ability to feed its domestic passengers into its Carlbbean service in New York.

Ironically, the Caribbean market is a lucrative one. American has discovered this, as has Eastern - but Pan American's losses in the area mounted in the late 1960s and 1970s as its competition grew, fuel costs rose, and other problems came along.

### McGovern raps Butz on food plan By Richard L. Strout written, and you don't want to run it

effective and efficient manner."

An implication of 'sabotage'

Staff correspondent of The Christian Science Monitor

Washington

.Fifteen million Americans entitled to benefits under the national food stamp program are not getting them. Sen. George McGovern (D) of South Dakota, chairman of the Select Committee on Nutrition, told Secretary of Agriculture Earl Butz in a confrontation here, and he demanded greater urgency in enforcing the law. Mr. Butz defended his handling of

administration controversy with Con-Congress recently overrode President Ford's proposal to cut back food

the program, currently the center of

Senator McGovern, unsuccessful presidential candidate in 1972, told Mr. Butz in blunt language, "If you don't like the food stamp program as

stamp appropriations.

McGovern subcommittee. The chairman charged that the program, which is a key factor in feeding families in communities hard hit by 8.2 percent unemployment, is not working well because field administrators "don't feel you [Mr. Butz] really want it to

The sabotage charge is the most formal leveled against the bluntspeaking Secretary of Agriculture. Mr. McGovern went down the list of duties prescribed for the secretary under the law and charged that his interpretations limited their effectiveness. Example: one section requires an "outreach" program (bringing in families unaware of their rights) "so that the millions of eligible families who need food stamps can be aware that they exist."

Law violation charged

Mr. McGovern said, "Mr. Secretary, your administration of this program daily violates not only the law as passed by Congress, but even your own regulations issued pursuant to

The hearing marks a move by Congress to improve and widen the food stamp program as the recession deepens. The Senator cited the recent finding of a district court judge on the outreach directive: "The secretary's: response to the congressional directive, when viewed in its totality, is fairly described as a total failure on his part to do what Congress intended

Neo-Tudor facades, ground-floor shops with modest neat signs, autos driving on the left: surely it's one of those finely manicured districts with old roots in Greater London, one would imagine; Pinner, perhaps, or Harrow. Only the new hotel rising above the rooftops in the background gives a hint of the actual location. The

hotel's namesake, Marco Polo, sailed by here on his way home from China near the end of the 13th century. The British came much later, and stayed long enough to leave their mark on the landscape - the bustling city of Singapore.

# Eine Herausforderung für die Tories

Die Wahl Margaret Thatchers zur Vorsitzenden der Konservativen Partei Großbritanniens ist eine außergewöhnliche Leistung. Es ist ihrem politischen Geschick und ihrer unermüdlichen Arbeit zuzuschreiben. daß sie nun in einer Position ist, wo sie vielleicht der erste weibliche Ministerpräsident des Landes werden

Ob sie jedoch die Fähigkeit zur Führerschaft besitzt, muß sich noch herausstellen, und eine gewaltige Aufgabe liegt vor ihr: den Tories neuen Aufschwung zu geben und sie zu einer starken, wirkungsvollen Oppositionspartei zu vereinen, die den Programmen der Labour-Regierung Harold Wilsons durchführbare Alternativen entgegenstellen kann.

Wenn sie dieser Aufgabe nicht gewachsen ist, mag der Konservativen Partei, wie sich ein Tory ausdrückte, die Rolle "einer dauernden Opposition, eines klassenbedingten Überbleibsels" zufallen, das nicht in der Lage ist, die Öffentlichkeit für sich zu gewinnen und die Programme, gegen die es opponiert, umzustoßen.

Thatcher comme leader du parti con-

servateur de Grande-Bretagne est un

exploit extraordinaire. C'est grâce à

de son pays.

/ son habileté politique et à son travail

In jeder Demokratie muß es neben der regierenden Partei eine starke Opposition geben. Doch es ist schlecht um die Tories bestellt. Solange sie an der Regierung waren, gelang es ihnen nicht, das zweifache Problem zu lösen, nämlich die Wirtschaft mit Erfolg zu steuern und gleichzeitig die aggressiven Gewerkschaften Großbritanniens in Schach zu halten, und als Folge davon ver-Ioren sie überall im Lande außer im Südosten an Boden. Es fehlt ihnen an Führern von hervorragender Begabung und voll spritziger Ideen.

Ihr Image als die Partei der Reichen schadet ihnen vielleicht noch immer am meisten, und es fragt sich nun, ob Margaret Thatcher einen breiteren Rahmen schaffen kann. Sie selbst kommt aus dem Mittelstand, doch sie hat, so meinen einige Kritiker, die kalte politische Ideologie des althergebrachten Konservatismus übernommen.

Die Briten kämpfen nun mit der schlimmsten Wirtschaftskrise in 25 Jahren, und es scheint klar, daß eins der grundlegenden Probleme nicht nur in dem Mangel an sozialer Dis-

cratie que ce soit qu'il y ait une

forte opposition au parti dominant.

Les Tories sont cependant dans un

pauvre état. Alors qu'ils étaient au

pouvoir, ils n'ont pas su résoudre le

problème bilatéral d'instituer une di-

rection économique effective tout en

tenant tête à la politique militante

des syndicats de Grande-Bretagne,

et cela a eu pour résultat qu'ils ont

perdu du terrain partout en Grande-

Bretagne, sauf dans le sud-est. Ils

manquent de leaders au talent bril-

lant et aux idées étincelantes. L'image qu'on s'en fait en tant que

parti des riches reste peut-être leur

plus grand désavantage et l'on se

pose la question de savoir si Mme

Thatcher peut augmenter l'attrait du

parti. Elle sort elle-même de la

classe moyenne, mais certains criti-

ques trouvent qu'elle a fait sienne la

vatisme d'antan.

Le défi lancé aux conservateurs

ziplin besteht, die notwendig ist, um die Wirtschaft zu beleben, sondern auch darin, daß der Mittelstand und die Oberschicht mit der Arbeiterschaft keinen Kontakt haben und nicht deren Unterstützung für ein industrielles Wachstum gewinnen.

Es ist also großenteils das uralte Problem der Klassenunterschiede, dem sich Margaret Thatcher gegenübersieht. Ihre Aufgabe wird darum noch größer, weil Ministerpräsident Wilson verhältnismäßig guten Erfolg hat. Es sind nun z. B. schwache Zeichen zu erkennen, daß die linksgerichteten Gewerkschafter bereit sind, in ihren Forderungen nach einer Nationalisierung der Industrie Kompromisse zu schließen.

Die neue Parteichefin der Tories wird also all ihre Kräfte und unbestrittenen Fähigkeiten aufbieten müssen, um ihre Partei wieder in Schwung zu bringen.

# Latin America waits and doubte

Kissinger followed talk of 'new dialogue' with year of canceled visits

By James Nelson Goodsell Latin America correspondent of The Christian Science Monitor

Rio de Janeiro

One year after Secretary of State Henry A. Kissinger launched his much vaunted "new dialogue" with Latin America, relations between Washington and its southern neighbors are at a new low.

There are many reasons. But the major current problem centers on Washington's new foreign trade bill a measure that was originally designed to free trade rather than hinder it.

But to Latin Americans, the measure with its prohibitions on preferential treatment to members of the Organization of Petroleum Exporting Countries (OPEC) is an affront. Two Latin American nations — Venezuela and Ecuador — are OPEC members.

Washington now is faced with a Latin América determined to express its feèlings.

Toward this end, Peru's president, Gen. Juan Velasco Alvarado, has called for continuation of the dialogue "but without the United States."

Although not all Latin America supports General Velasco, there is near unanimity on taking a united stand in the face of what the Buenos Aires newspaper Clarin called Washington's "damage to the fundamental interests of Latin American nations."

Clarin went on to condemn Washington's tendency to "relegate relations with Latin America to the back

Secretary of State Kissinger, in announcing his new dialogue last February in Mexico City at the meeting of hemisphere foreign ministers,

bakery.

### Eye on Latin America

indicated that the dialogue was aimed at ending this tendency.

But Latin Americans, in the year since the so-called Tlatelolco meeting at which Dr. Kissinger spoke, say they have seen few signs that Washington does indeed plan to change things.

We're still second-class citizens as far as Washington is concerned," a Venezuelan foreign ministry official said in January. 'It is business as usual in Washington's eyes."

Much of the criticism is leveled at Dr. Kissinger himself,

There is a growing tendency to doubt that Dr. Kissinger really is sincere in his efforts to set up a 'new dialogue." Despite an original inclination to approve Dr. Kissinger's appointment as Secretary of State in 1973, there now is deep cynicism about him spreading throughout Latin America.

In this vein, Jornal do Brasil, Rio de Janeiro's leading newspaper, recently carried a list of canceled Kissinger trips to Latin America.

"The announcements of cancellation of his visits to Latin America come with the same regularity as the promises of visits," the newspaper

This was a comment springing from Dr. Kissinger's cancellation of a February visit to five Latin American nations including Brazil — a cancellation announced just after Argentine Foreign Minister Alberto J. Vignes announced postponement of the scheduled March foreign ministers'

meeting in Buenos Aires as a result the trade bill.

Visit to be made

The State Department in Washing ton subsequently said Dr. Kissinge would go shead with the visit in April "But that is another slap in our face," said a Brazilian foreign min

istry official. "How can Washington go on with this sort of charade Doesn't it realize we have sensi tivities and that we need to be considered in Washington's think ing?"

In a sense, this comment goes to the heart of the issue.

Latin Americans do, indeed, fee that Washington plays with its rela tions with the hemisphere, that it does not regard the area as all tha important.

To many Latin Americans, it now is up to Washington to carry the ball, I Washington really does mean to pur sue a new dialogue, it must prove

### [Cet article a paru en anglais à la dernière page du Monitor du 13 place to work." Family rebuilds player pianos

By the Associated Press

Aurora, III. The Bob Johnson family spends much of its time gathered around pianos, not to sing, but to take them apart.

They rebuild player pianos and use the insides of some to put together nickelodeons.

"We can sell all we can build, but there isn't much profit. It's more a labor of love, developing from a hobby into a family project," said Mr. Johnson, whose main income is from playing the banjo and organ as a professional entertainer. His piano plant - an

outgrowth from his days as . a piano tuner a dozen years ago — is in the basement of the family's modest home.

Jobs distributed

Repairing valves and bellows, installing glass front panels of flowery designs, and rebuilding keyboard and music roll components are just a few jobs distributed among John--son's wife, Lorrie, and children - Gregory, David, Denny, and Krissy, They range in age from 13 to 16.

Mr. Johnson says mak-

ing a nickelodeon, with its drums, tamborines, and array of other instruments, involved about 500 working hours and \$1,100 worth of parts.

'"The popularity player pianos peaked around 1918 and began waning when the phonograph and radio came on." said Mr. Johnson. "The nostalgia kick has created a new demand for them, mainly for use in family recreation rooms.

"The oldest one we've worked on was a 1906 model. It was built like a tank, and we certainly had fun tearing into it."

Amsterdam's answer to the snarls and smog of downtown driving: the Witkar

# Amsterdamers in pollution-free car

Two-seat Witkar, battery operated, goes 18 m.p.h.—'it looks like a space buggy'

By the Associated Press

A little white battery-operated car nat goes 18 miles an hour, emits no ollution, and makes only the lightest noise is going into use in

Some Dutchmen say the two-seat /itkar — meaning white car — may e at least a partial answer to TRAULmsterdam's downtown traffic conestion and air pollution.

It looks like a space buggy, and a edestrian can summon one at a trategically located depot by inarting a key — for which he has paid refundable deposit of 25 guilders \$10) — into a computer control box.

The Witker is the invention of aud Schimmelpennick, but it derives ts name, color, and purpose from the butch Provo movement of the 1960s. the Provos - short-for provocateurs sought fundamental social and avironmental changes, among them solution to Amsterdam's traffic ongestion and air pollution

- \*: " aying members attracted

The Witker is 5 feet, 9 inches long; DOT feet, 8 inches wide; and 61/2 feet igh. There are only four of them on Destreets now, but organizers of the overnment-backed Witkar Cooperave Association say they have atacted 2,500 paying members and an to put 280 vehicles into service in e next three years.

Withar spokesman said that many Amsterdamers drive only an average distance of about a half-mile inside Amsterdam each day.

He added that when the Witkar program is in full swing, there will be 35 Witkar depots about 1,000 feet apart throughout the city.

Witkar members pay the guilder equivalent of \$10 for lifetime driving privileges in addition to the key deposit. They also pay about four cents a minute for use of a Witkar.

The key is personally coded and fits both the car and a system of computer

Parking space checked When the computer is fully installed

in March, a prospective driver will be able to requisition a car at any depot by inserting his key into the computer-control board and specifying his destination. The computer will check parking availability at the destination depot, and if room exists the driver will be allowed to go there.

If the depot is crowded the driver will have the option of traveling to another depot where parking is avail-

The computer will also bill the driver's account for time used.

The cars pack only 15 minutes of power, but Witkar station design provides for an automatic battery.

# Czechs prefer country cottages

By the Associated Press

Chatomania is a word coined by the Czechoslovak press to describe the irresistible urge to own a weekend cottage, known here as chata.

Czechoslovakia as a whole is second only to France in cottage ownership. but according to official surveys the capital of Prague holds a world record, with 50 percent of its people spending their weekends in their country cottages.

While there were 28,000 weekend houses in the Czech lands in prewar times, by 1978 there were already 160,000, the majority in the vicinity of Brague. A similar trend is evident in sighboring Communist countries to satisfy yearnings for a private home away from home.

The word chata, the equivalent of the Russian dacha, means a cottage but, in fact, may describe anything from the simplest log cabin or even reassembled sales stand to a luxury villa complete with swimming pool.

New words have lately been derived from chata: chatarenni literally means cottaging and chatar is the person engaging in cottaging. The word is now so much part of the language that a monthly publication dealing with weekend house design and maintenance is called Chatar.

In Prague everybody travels to work in their autos on Fridays in order to leave for their weekend cottages the moment work ends, or before if possible. By 4 p.m. traffic is bumper-to-bumper headed out of

It is increasingly difficult to find an isolated spot for a chata and huge conglomerations have mushroomed around all attractive spots within easy reach, giving rise to a host of problems and rising prices.

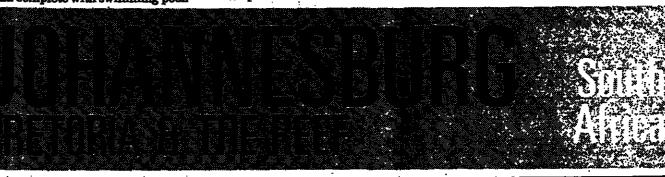

A chata is considered the best and, surest investment in Czechoslovskia. Today's high prices are likely to rise further because a state plan envisages only 25,000 new chatas can be built in the country before the saturation point is reached.

chaotic cottage building became very apparent. A 1971 law defined areas where new chatas could be built and transferred from local to regional authorities the power to grant permits for new projects. The regions also have the power to dismantle at the builder's expense chatas built without appropriate permits.

A Slovak paper reported that 43 percent of chatas built in the Mala Fatra area lacked authorization.

While it is understandable that urban. Czechs who live mostly in apartments of a limited size long to get into the country, the authorities point out that in some chata developments density is higher than in many Prague areas, santary provisions are mostly primitive, shopping facilities overstrained and local police, needed to cope with rising chata break-ins, overburdened.

Yet for the Czechs, chatareni is almost a way of life. Florists increasingly sell seedlings and plants. Alpine gardening exhibitions are crowded.

WITH ANALYSIS FROM MONITOR CORRESPONDENTS
AROUND THE WORLD

U.S. weighs guarantee of Mideast settlement

Washington The United States is considering guaranteeing a final Middle East settlement, but not individual guarantees for interim agreements, the State Department said Thursday.

"There is no talk about any kind of guarantees in this phase of diplomacy in the Middle East," State Department spokesman Robert Anderson said.

Speculation has surfaced in recent days, during Secretary of State Henry A. Kissinger's trip through the Middle East, that the United States might offer guarantees of Israel's security or of Egyptian nonbelligerency. But Mr. Anderson said the United States had made no proposals along this line.

### Interest in EEC may unite feuding Irish

Dublin Irish Foreign Minister Garret Fitzgerald says sectarian strife in Northern Ireland, including "the murderous campaign" of the Irish Republican Army and Protestant

Foreign Minister Fitzgerald

paramilitary gangs reacting against it, has postponed a reunion of divided Ireland indefinitely.

He also says a search for a solution "curiously" has intensified contacts between politicians from Northern ireland and the Irish republic, "but the gulf created by the iRA activity will take a long time to bridge."

In an exclusive interview with the Associated Press, Mr. Fitzgerald expressed the view that the gulf between Ireland's feuding Roman

Catholics and Protestants ultimately may be bridged through the interests they both share in the European Common Market.

### Governors fail to agree on energy proposal

A resolution opposing President Ford's new oil import tax failed to secure a required three-fourths majority at a meeting of state governors

Thursday. The Governors voted 28-12 for the resolution calling for conservation or, if that does not work, fuel allocation as a

means of dealing with the energy crisis. In a later action, the governors adopted a resolution saying all-out conservation is the best-short term approach to the country's energy

### Oil-tariff battle halts Indo-China trip

Washington White House and congressional differences on oil tariff legislation have delayed a congressional tour of Indo-China that President Ford hopes will generate support for increased military aid to the region.

State Department officials acknowledged Thursday that a congressional trip to Indo-China proposed by President Ford has been postponed indefinitely.

Officials said it would not be feasible to hold up the administration's aid request "for a trip that may or may not

The 10-day expedition was to have left for Saigon this weekend with some 20 members of Congress aboard a presidential-style Air Force jet. There was no immediate White House comment on the reported postponement.

A number of senators and representatives have said they do not want to leave Washington now because Mr. Ford is expected to veto a bill that suspends his oil tariff program for 90 days. Congress will vote on whether to override the veto, and the lawmakers want to be on hand when the votes are

### U.S. asks oil firms to join aid pact

Washington The federal government asked oil

companies Thursday to cooperate in distributing petroleum abroad in case of a new Arab embargo or other emergency, and promised to protect them from antitrust laws in return.

Representatives of the Federal Energy Administration, the State Department, the Justice Department. and the Federal Trade Commission met here with oil-company spokesmen to review the draft of a voluntary agreement between the companies and the government. Three large companies - Exxon, Mobil Oil, and Amerada-Hess - immediately indicated a tentative willingness to join such an agreement.

The government proposed the agreement to implement its participation in the International Energy Program which the United States signed in Paris last November.

### Arabs threaten oil blockade of Ethiopia

The Arab countries will probably declare an oil blockade against Ethiopia, if the Eritrean civil war is not settled quickly, reliable sources reported here.

The sources said they expect more than one Arab state to call for an emergency session of the Organization of Arab Petroleum Exporting Countries (OAPEC) and propose the embargo.

But in Beirut a spokesman for the Eritrean rebels said Ethiopia gets much of its oil from Iran, which although a Muslim country is not Arab and did not participate in the Arab blockade of the United States during the 1973 Arab-Israeli war.

Along with Syria, at least two of OAPEC's members, Libya and Iraq, have been supplying arms and financial assistance to the Eritrean Liberation Front, the Muslim guerrilla movement that has been fighting for independence since Ethiopia annexed the former Italian colony in 1962.

### **Gulf Oil signs protocol** with Soviets on coal

James E. Lee, president of the (U.S.) Gulf Oil Corporation, signed a protocol with Soivet Coal Minister Boris Bratchenko Thursday on cooperation in obtaining liquid fuel from coal and in coal gasification. Tass news agency reported.

In a four-day visit to Moscow, Mr. Lee also signed protocols on scientific and technological cooperation with four other ministries - of the geology. chemical, oil, and oil-processing and petrochemical industries. No details of these were released.

# Fast grass: nifty zoo food

Brookfield Zoo has developed the fastest grass this side of the Pecos,

growing carpets of it in seven days as a cost-saving food supplement for "We grow barley seed in trays, spraying it with a water solution for 10

minutes every six hours under fluorescent lighting and in constant 68 degree temperature," said Dewey Garvey, commissary manager.

We use a tiny amount of bleach to keep out fungus and a stabilizer that keeps the seeds full of nutrient. We can plant three pounds of seed and in seven days peel off a carpet of grass six inches high weighing 20

Mr. Garvey says he is harvesting 400 pounds of the fast grass a day as a supplement for lettuce in the diets of such animals as deer, bison, elephants, kangaroos, antelopes, giraffes, and monkeys.

A pound of seed costs six cents and a pound of lettuce costs us about 30 cents or more," said Mr. Garvey. "We are saving about \$5,000 a year in our food bill. And the grass is higher in protein, carbohydrates, and minerals than lettuce. Who says there's no excitement in watching grass

The heaviest eater is Ziggy, which the zoo calls the largest elephant in captivity. He gets 20 pounds of fast grass in his daily diet of 400 pounds

### Arabs, PLO to draft strategy vs. Israelis

Cairo Representatives of Arab countries directly confronting Israel and from the Palestinian Liberation Organization will meet in Damascus, Syria, next week to discuss a common diplomatic strategy. Arab League sources said Thursday.

The foreign ministers of Egypt, Syria, and Jordan are expected to attend the meeting, along with Palestinian leader Yasser Arafat or his deputy, the sources said.

### Colby assails anti-CIA attacks

Washington Intelligence chief William E. Colby lashed out Thursday against "the sensational allegations of CIA misdeeds" which he said have

William E. Colby damaged relations with friendly intelligence services and endangered the lives of undercover agents "These exaggerations and

misrepresentations of CIA's activities can do irreparable harm to our national intelligence apparatus," Mr. Colby said in a statement prepared for delivery to a House appropriations subcommittee.

Included in the 20-page statement was an apparent attack on the credibility of former White House special counsel Charles W. Colson and a claim that New York Times reporter Seymour M. Hersh has allowed himself to be misled by his sources in reporting that the agency had conducted a massive, illegal domestic-spying campaign. Neither Mr. Hersh nor Mr. Colson was mentioned by name, but Mr. Colby's statement made clear he was referring to them.

### Wallace: third party?

Gov. George C. Wallace of Alabam indicated Thursday there is a distinct possibility he would switch to a third party, if Democrats don't change course from their 1972 presidential campaign. Mr. Wallace was interview on the ABC's "AM America" program

### Eritrean recall

Ethiopian military authorities have recalled at least 90 officers and men from the Eritean provincial capital of Asmara in recent weeks to face disciplinary measures for "excesses" in clashes with secessionists, reliable sources in Addis Ababa said Thursda

### Portuguese ministers

Two Portuguese naval officers were appointed to the Cabinet Thursday in Lisbon. The Defense Minister is Vice-Adm. Silvano Ribeiro who took the place of Vice-Adm. Antonio Rosa Coutinho in the junta while the latter was serving as head of the Portugues governing junta in Angola. The Minist of Information is Cmdr. Jorge Correla Jesuino who was Secretary of State f. Information in Angola.

### Russian shot as spy?

The Soviet Union indicated Thursda that it has shot a Russian identified only as V. G. Kalinin for treason and spying. A brief official report in the government newspaper Izvestia said Mr. Kalinin had been tried for collection and transmitting state and military secrets to foreign agents.

### Clemency reminders

The Presidential Clemency Board h stepped up its radio-television campaign to remind those eligible tha President Ford's program will end March 1.

### German Army shift The West German Cabinet has

decided to recruit women into its armed forces for the first time. To begin with, only women doctors will b accepted, but Defense Ministry spokesman Armin Halle did not preclude the possibility that West Germany eventually will have a women's army corps, similar to those the United States and Britain.

# \*Glut of oil forcing some minor price cuts

\*How new era affects U.S. ties

and Syria to Lebanon, said that the line had been shut down as of Feb. 9 oecause storage capacity at Zahrani, the line's terminal point, was filled.

The line normally pumps 450,000 barrels a day, but already 3.5 million barrels are in storage at Zahrani and the tanks can take no more. It will take at least six months to work through the backlog.

A mild winter and decreased activity in most industrialized countries have led first to a drastic fall in international tanker rates and then to progressive cutbacks by major oilproducing countries.

Tapline is one of the victims. Today it is cheaper by \$2 per barrel to ship oll by tanker from the Persian Gulf all the way around the Cape of Good Hope into the Mediterranean, than to transship via the pipeline.

Under normal circumstances there should be a drastic fall in oil prices, from the \$10 to \$11 a barrel of today to perhaps the floor level of \$4.50 a barrel recently suggested by Viscount Etienne Davignon, chairman of the 18-nation International Energy Agency (IEA).

But the OPEC countries as a whole have so far successfully held the line,

the high days of Empire.

Characteristic noted

Saudi Arabia produced 7.6 million barrels a day in January, down from 8.8 million in October. Iran produced just over 5 million barrels a day in January, down from 5.4 million in December. Kuwait produced 1.8 million barrels a day in January, compared with 2.5 million a year earlier.

Libya produced less than a million barrels a day in January, 50 percent less than peak production. Abu Dhabi produced 770,000 barrels a day in January, compared with 1.2 million in December.

The oil-consuming countries also face a dilemma, typified by Sir Derek's remark. In developing alternative sources of energy Britain, for instance, will rely not only on North Sea oil but very heavily on coal. Yet because of higher wages and inflation, steam coal for electric generation is only 10 percent cheaper than fuel oil today, Sir Derek said.

The coal board's ambitious development plans depend to a large extent on how long coal can maintain its price advantage over oil. A lower oil price may be good for Britain's balance of payments today. But it will not be good for coal and coal miners

Moscow to "push forward in increasing trade and economic relations" between the two nations.

Given the division of responsibilities between Congress and the White House, Mr. Parsky explained to Soviet officials, the U.S. could "make no commitments" on credits, a subject on which the American delegation was "pressed" by the Russians.

He found Soviet officials "willing to work with us," said Mr. Parsky, who stressed the importance of "educating the American people" about the benefits of two-way Soviet-American

Such trade solidly favors the U.S. whose exports to the U.S.S.R. last year were \$609 million, against imports of Soviet products worth \$350

American firms, says U.S. Commerce Secretary Frederick B. Dent, were negotiating with the Soviets for 'projects involving \$2 billion to \$3 billion at the time recourse to Ex-Im Bank credit was cut off' by Congress.

Trade between the two nations this year may not be affected by the trade agreement collapse, observed Mr. Parsky to this newspaper. But the loss to American companies in 'long-term projects" is hard to estimate. "Credit," stressed Mr. Dent, "is

readily available to the Soviet Union in Europe and Japan in large amounts at favorable interest rates.'

Britain has just offered \$2 billion in credits to support British exports. More than \$1.5 billion in French exports are covered by French credit guarantees. Japan has a \$1 billion credit deal with Moscow, Italy is financing \$600 million worth of gaspipe deliveries, West German firms sell substantial credit-guaranteed exports to the U.S.S.R., and Sweden has provided \$100 million in credits for hotel construction in the Soviet Union.

Left standing in somewhat flimsy isolation by the scrapping of the 1972 trade accord is a "Long-term Agree ment Between the U.S. and the U.S.S.R. to Facilitate Economic, Industrial, and Technical Cooperation," signed in Moscow, June 29, 1974.

The 1972 trade agreement was to have given body to the 1974 accord, which provided for regular exchanges of information and for the opening of Moscow offices by American firms doing business with the Soviets.

Now the long-term agreement. though shorn of much substance, provides at least a framework for bilateral consultation on what to do

### \*Jane Fonda speaks frankly in Moscow Continued from Page 1

Her interview was given to Soviet script writer Alexei Kapler who adapted the story for the film. (Mr. the man who was sent to a prison camp as a British spy because Stalin's daughter Svetlana fell in love with him. Svetlana now lives in the United States.)

The political undertone of the interview was apparent. 'T'm not easily scared," Miss Fonda retorted in response to a question about strong feelings aroused in certain American circles because of her activities against the Vietnam war.

As usual Miss Fonda was elegantly caustic in her comments upon most subjects, ranging from Hollywood to new-wave films. She spared no one, though she took the opportunity to express her thanks "for the assistance which the Soviet people are sending to Vietnam." However, she bluntly pointed out - underlining the political motives behind the fuss being made about her here — that "in the Soviet Union people know more about me as a fighter against the

Vietnam war than as a film actress." She went on to say that of all her films she liked only "Klute" and "They Shoot Horses, Don't They?" which is the one film of Miss Fonda well known in the U.S.S.R. "Klute" could never pass the official prudery of the censors which stifles the arts here, particularly the stage and the

But the welcome being given to Miss Fonda is more out of political admiration for her than anything else. This is evident from the comments by Mr. Kapler which precede the interview in which she is described as a "well-known American actress and political personality."

### **★Junior officers** worry Madrid Continued from Page 1

• In January Minister of the Army Francisco Cozma Gallegos gave a warning against soldiers meddling in politics. If anybody in the armed services felt he "could better serve his country by following a certain political line," General Coloma said, he should get out. The minister also denounced "the spreading of baseless rumors for the purpose of causing anxiety.''

The apparent malaise in the Spanish armed forces is seen as a reflection of the deepening sense of unease in the country as a whole as its authoritarian regime is battered by dissent from the Right, Left, and

The title of the interview is "Jane Fonda -- anti-star."

On Hollywood Miss Fonda said: "At resent in Hollywood it is becoming increasingly difficult to make films in which it would be possible to convey something important."

Expressing her philosophy of films, Miss Fonda explained to the Soviet readers that a work of art should not be meant only for film critics and intellectuals. She went on to claim that "the country where very interesting films are being made at present is Cuba.''

Ideology sits heavily on the Soviarts, though it is done in the name Marxism. Miss Fonda has yet 1 realize perhaps that while Marxi: critiques of bourgeois art are illum nating, Marxist practices in the art

are with few exceptions boring. These few exceptions are foun mostly in the category of dissident ( near dissident art, which is onl reluctantly given recognition, as wa the case with the film "Rublev. Directed by Andrei Tarkovsky, th film about Russia's most famous ico artist received international acclair at the 1969 Cannes Film Festival.

# ★Israel debates talk of military treaty with U.S.

Continued from Page 1

hours of Thursday. Neither was the subject mentioned when the Prime Minister and Secretary of State held discussions alone in Jerusaiem last

"If Dr. Kissinger has not been misunderstood by pressmen, the whole thing may turn out to be a mere carrot which should induce us to withdraw [from the strategic passes in Sinai]," one highly placed source commented. "Once we pull back, the idea of a military treaty could be dropped by Washington as unpracticable," he added.

Most newspapers here restricted their handling of the military treaty to newspages only. The two that commented editorially \_ the pro-government Davar and the independent Yediot Aharonot - were far from enthusiastic. Davar stressed that such a treaty could not come instead of a workable peace arrangement with the Arab states or as a replacement for a strong Israeli Army but rather as a complementary factor. Yediot rejected it as "a bad sugges-

### Big-power guarantee rejected

But unconnected with the current flow of Washington reports, a number of Israeli key figures have gone on record since the October war of 1973 with definite views on the subject of a military treaty with the U.S. They include Defense Minister Shimon Peres and Foreign Minister Yigal

They both rejected the idea of great-power guarantees. On the specific subject of a defense treaty with the U.S., though, Mr. Peres was somewhat more reserved than Mr.

"We would not like to suggest program."

anything which may lead the Amer icans to feel necessary to interven militarily in this part of the world, Mr. Peres explained in an interview with this correspondent last month 'Although many Israelis would loo upon such an offer with favor ... would not commit myself in an

Mr. Allon, however, said that military treaty "might prove useful h neutralizing a hostile great power (meaning the Soviet Union), speaking to the Labor Party's Central Com mittee two months after the Octobe war of 1973. "Such a treaty could als secure continuous military supplie and perhaps also help open the gate of the European Economic Commu nity at some future date."

Experts concur

Prime Minister Rabin is known to feel that his reservations about a U.S. Israeli treaty are strengthened by the prevailing opinion of Israeli experts on American affairs. They believe that "even President Ford could not obtain congressional approval if he advocated the conclusion of a military treaty with Israel."

Current Washington reports give 8 powerful boost to advocates of American military bases in Israel. These advocates are mainly in the Liberal Party, which is a major component of the Likud, the strongest opposition bloc in the Israeli Parliament. A fiveman subcommittee, charged with exploring the question of a military treaty with the United States, submitted its findings to the party's central committee last month. In it, the subcommittee proposes that the Liberal Party and the Likud should adopt the idea of military treaty with the U.S. as part of their policy

# Profiling nature's secrets

The role of trees in the forests, algae in lakes, and soybeans near cotton fields — and other aspects of nature — have been reduced to mathematical formulas and computer models. So armed, scientists hope to better understand man's impact on his environment and, ultimately, change it for the better.

By David F. Salisbury

Staff correspondent of The Christian Science Monitor

These are some of the discoveries from a seven-year

The program set out to study the environment in a new

way. Instead of merely describing how trees grow in a

balance of nature, scientists tried to explain the

conditions in mathematical terms. This is an essential

step to understand and predict man's effect on his

By translating the activities of plants, insects, and

animals into numbers, the scientists have begun to

called the International Biological Program (IBP).

in the role animals play in maintaining the

aging air pollution, is one such warning.

inconsistencies found

instead of ordinary fertilizers.

Preserving these wetlands has been the goal of environmentalists because they are a refuge for wild birds. But IBP scientists have found that these areas play another important role. They trap phosphorus from the water running off the land. Draining wetlands can increase phosphorus pollution 10-fold, says Dr. Orie Loucks of the University of Wisconsin.

chemical plays a part in polluting lakes.

Computer models have been made for a range of different environments: desert, grassland, lakes and rivers, tundra, pine and hardwood forests. Places in the ocean where the world's richest fisheries are found were studied. Investigations of Eskimos, Aleuts, a native tribe living high in the Peruvian Andes, and another deep in the Amazon jungle provided new insight into the effects of modern civilization on people.

"We were more successful than we had any right to expect," says Dr. W. Frank Blair, head of the U.S. contingent, "although it did not fulfill our fondest hopes." Another example of how ecologists have attempted to determine the side effects of human activities involves anchovy fisheries off Peru, one of the world's largest sources of cheap protein. Scientists now believe they can calculate when overfishing will endanger this natural marine resource.

### Ranchers can learn

Researchers studying the grassland areas now can advise ranchers on the best ways to manage range land. For instance, they can determine the proper size of the coyote population. Coyotes keep the rabbit population in check. Rabbits eat the same plants as cattle do. Thus, coyotes can help save grazing areas for cattle.

Analyzing the microscopic life in various types of lakes, a discovery was made that could help combat the green scum that is one of the more annoying effects of pollution. Different types of algae and bacteria dominate at different times of the year. By properly controlling the types of nutrients in a lake it could be possible to eliminate unpleasant and unsightly forms.

One major environmental problem is the effect of manmade chemicals. One group studied the pathways of the pesticide DDT through the food chain to man. As a result, they predicted the effects on man in 50 years, of three different policies: an immediate DDT ban, gradually phasing out its use, and continued low-level application. They found that the difference between the first two was slight. But continued applications would result in higher DDT levels in people. The EPA has cited this study in court.

Fitting man into the ecological equation was one of the most difficult tasks that was attempted.

### 'No idea' how to start

"When we began, we had no idea how to proceed," explains Dr. Paul T. Baker of Pennsylvania State University. "By the end we at least had a few tools to work with in the simpler societies where man's interaction is easier to understand."

Despite all its successes, Dr. Blair thinks the international program had some major flaws. The worst, he thinks, was a failure to seek out and persuade scientists in the developing countries to take an active part. Another was failing to ensure that the program had an adequate follow-up.

Then, too, the effort to put together a computer model that described a single environment in all its complexity proved too difficult to do with the resources at hand. The models that were developed each focuses on only certain aspects of the whole, like the effect of coyotes, jackrabbits, and cattle on grassland.

The International Biological Program was conceived in the early 1960s, when environmental consciousness was sweeping the globe. Yet its beginnings were surrounded by controversy. Many felt it was too ambitious and could not possibly live up to its goals.

### Cooperation doubted

Chemists, biologists, ecologists, anthropologists, and mathematicians would not give up their individual research to become part of the large research teams necessary some critics argued. Others considered it presumptuous even to think the intricate life of the environment could be totally understood, let alone reduced to mathematics and force-fed into a computer.

Yet scientists did participate, by the hundreds, and they have achieved some strikingly valuable payoffs from their attempts to put ecology on a firm mathematical foundation.

Although originally conceived as basic research, the scientific tools devised during these years are finding immediate application. In the U.S., the Forestry Service, the Environmental Protection Agency, the Department of Agriculture, the Energy Research and Development Agency, and many state departments are using techniques and information from the program.

Internationally, the United Nations' Educational, Scientific, and Cultural Organization's "Man in the Biosphere" program is designed around IBP concepts. And the UN's Environmental Program is relying heavily on its results.

Military police at government palace: symbol of watchdog role

# Democracy at stake in Portugal

Proponents hope drive for new constitution can survive free elections set for April 12

The flame of a new democracy was lit in Portugal in the April 25 coup last year. The flame has flickered in recent weeks under leftwing pressures. Can it survive the coming elections for an Assembly whose task will be to draft a new constitution?

### By Douglas L. Wheeler

Portugal is preparing to vote this spring and most of its people are apparently counting on having a genuinely free and open

The Armed Forces Movement (MFA) which has effectively run the country since the military coup of April 25 last year, has set the election date for April 12.

It thus is following through on its promise to hold elections for a Constituent Assembly before the first anniversary of the coup.

In doing so it has resisted considerable pressure from the extreme Left to postpone or cancel the elections on the ground that "the people" were not prepared.

As of now the outcome of this popular vote

is difficult to predict for at least four reasons:

• In the last elections under the dictatorship (October, 1973) only 2 million voted, but
the current registered voter total is 6 million.

• Large numbers of voters have not made up their minds, but a portion will vote for, in effect, "the government," or that party they feel the Armed Forces Movement supports.

The leftist bias of much of the media may or may not have a decisive impact on votes.

• The Communist Party (PCP) may or may not enter the elections in a coalition with other parties.

### Accuracy questioned

Public opinion polls give the PCP from 15 to 20 percent of the vote, and the moderate parties, the Socialists and Popular Democrats, a larger percentage each, but such polls may not be accurate. Moreover, under the new electoral law passed by the provisional government publishing the results of political public-opinion polls will be illegal during the pre-election campaign period. (Communists, Socialists, and Popular Democrats participate in the provisional govern-

Since the coup the government has made considerable progress in decolonization settlements with African nationalists in Guinea, Mozambique, and Angola. But it is in internal politics, in the structuring of a democracy, as pledged in the Armed Forces Movement's famous "program," that the greatest uncertainties remain.

A major development has been the institutionalization of the military as a political

Not only has the military come to dominate and monitor the decisions of the provisional government, but it has built an intricate structure of political organs which are parallel to the civil organs.

### MFA 'better organized'

As a young officer explained to Portuguese emigrants in an orientation meeting in Paris, the MFA is, in effect, a strong "political party." He claimed that it is more coordinated and better organized than the regular political parties.

Moreover, some groups of citizens not in the military look upon the Armed Forces Movement as a political party. Private monetary "campaign" contributions are accumulating on behalf of the MFA and some claim that they will, in effect, "vote" for the MFA in the forthcoming election.

Many officers, both Marxist and non-Marxist, believe that political institutionalization of the MFA should continue even after the 1975 elections.

Even if the MFA has promised not to participate formally in the elected Constituent Assembly, it is possible that it may hand that Assembly a defined mandate within which its members must operate in writing a new constitution.

As the country approaches the election campaign the struggle for power by the Communist Party and its allies has come more into the open.

Last month the extreme Left in the Cabinet and in key bodies of the Armed Forces Movement got its way in significant decisions: to legalize a single trade-union federation, to forbid street demonstrations by Socialists, to provide minimal and tardy protection for a congress in Oporto of the right-wing Center Social Democrats, who were then obliged to cancel their remaining

on the Left there is fear of a revival of precoup "reactionary" forces. In the Center and on the Right there is fear that Portugal may become an Iberian "Cuba" or base for Soviet anti-NATO activity.

### More freedom noted

But despite certain abuses of freedom and some lawlessness on the part of extremists, there is more freedom in the new Portugal and a kind of Lusitanian democracy has at least a reasonable prospect of emerging.

If Portugal has progressed since the failure of its first parliamentary democracy 50 years ago, there are some lessons to be learned. Constructing a democracy will require the efforts of large numbers, not just a few citizens. It will take courageous officers, judges, and politicians to resist the siren call of extremists.

To build a new system on justice for all, social equality, and the rule of law, no one party or group can have a monopoly of power or access to freedom of speech. A street demonstration — sometimes the cause of a fall of government in 1920 Portugal — should not be equated with "demogracy" or "the will of the people" as much leftist rhetoric would have it.

A great deal will depend on the way the elections are held. Just how much freedom exists in the new Portugal will become clear on April 12.

Douglas L. Wheeler, a history professor at the University of New Hampshire, Durham, is a specialist on Portugal and Portuguese-African affairs. He recently returned from a visit to Lisbon.

# house/garden

# What it takes to grow your own vegetables

Growing your own food can save you money, if you garden wisely. In a series of four articles, of which this is the first, a veteran gardener tells you how to make the most of a small vegetable plot.

> By Peter Tonge Special to The Christian Science Monitor

Let's say you have a sunny space for a garden that is 25 feet wide by 30 feet long, or a combination of small areas that together total 750 feet.

Such a garden should readily yield \$300 worth of vegetables per season in the colder northern sections of the United States and more than that where less severe climates provide a longer growing season.

But what will it cost to get this

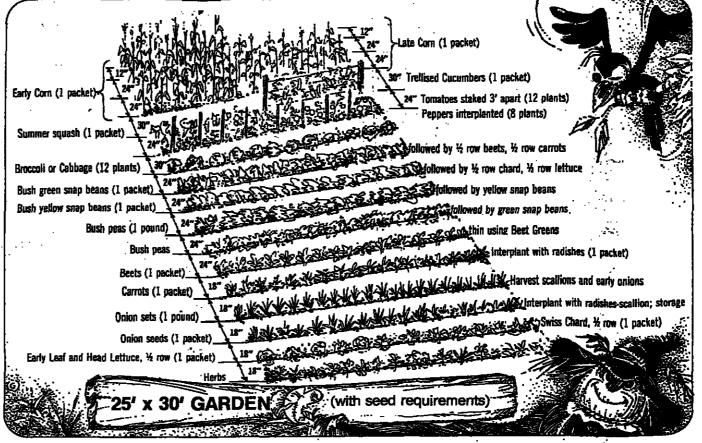

garden into productive shape? Will it. in fact, pay a novice to launch out and grow his own vegetables? I think it

### Expense accounting

Of course, your success depends heavily on where you are and what you already have on hand. But let's assume that your soil is poor and that you are totally dependent on a gardening outlet for all your supplies, including soil-building materials. In other words, let's assume you are in the most costly of all gardening situations.

Under such circumstances, then, a new garden of 750 square feet could cost between \$100 and \$110 in the more northeastern United expensive

At this point, let me stress that I have never spent remotely that

amount on my garden in any one year. Moreover, the bulk of these costs are first-time expenses only. Most gardeners will readily find ways in which to economize.

### Proper tools

For a start, though, no gardener can work without tools. The pointed digging stick used by our ancestors makes gardening too laborious and time-consuming. Basic tools (using prices in the Boston area as of January, 1975) come to \$36; soilbuilding materials and fertilizer come

to roughly \$35; seeds and plants to \$11. Included in this estimate of initial costs are a day's rental of a rotary tiller and cost of the gasoline to run it - \$19. That's a total of \$101.

### Once-only items

To break down these costs further, the basic tools are: spade, \$5; fork, \$6; rake, \$4; hand trowel, \$2; bucket, \$2; wheelbarrow \$17. Recommended soil-building materials are: 2 bales of peat moss, \$15.50; 2 bales of hay, \$4.20: 200 pounds composted cow

manure, \$10.36; 50 pounds 5-10-5 fertilizer, \$3.95; and 80 pounds of lime

Seeds and plants, of course, are a constantly recurring expense for the home gardener. On the other hand, tools that are looked after should last a decade at least, and soil-building materials should largely be replaced by waste generated in the garden itself and by other such "free" materials as leaves or kitchen scraps. This will be dealt with more extensively in a subsequent article in this series. The tiller, unless you want to use it

should be a once-only expense. Also, you can hand dig even a new garden though this might be a bit laborious if you are working with sod. Till the soil several times until it is

every fall to plow in the residues

easily worked to a depth of about eight inches. Then spread the two bales of peat moss over the new garden and till again. Work the soil this way until it is smooth. Then add the composted manure and lightly fork it into the planting rows. Don't waste it where you intend to have a

### Testing your soil

Now consult your local county agent on how much lime to add to your garden. Better yet have a simple 'ph" test of your soil to show whether it is acid or alkaline. In most areas the county agent or state experimental station will do this without charge. Lime helps to neutralize overly acid soils and benefits most soils in the United States other than in the naturally lime-rich Southwest

Your garden now is ready for planting. Use the fertilizer as a side dressing during the growing season and, once the soil has thoroughly warmed up, spread the hay liberally as a muich.

To help plan your garden, study the scheme shown here for a 25 by 80 foot garden designed by Dick Raymond, a gardening specialist for Garden Way Associates. It is the best such plan I have yet seen. It includes only those tried and tested vegetables, "sure crops" Mr. Raymond calls them, that produce easily in moderately good soil. The cost of the seeds and plants mentioned in this plan should amount to roughly \$11.

Next Friday: Start your seeds in.

### Treated masonry absorbs some water

"I want to preserve the antique brick veneer on our

with a periodic application of silicone. We don't want to paint. Any suggestions?" Charles S. Adams

Batesville, Ark. Ronald G. Nickson of the Brick Institute of America says:

"The institute recommends against the application of silicone or paint to the surface of brick masonry. The best solution is to keep moisture away from the wall by the use of overhangs, proper flashing, and caulking around the openings. In addition, water sprinklers should be set in a way that they do not spray onto the wall."

Here are some excerpts from one of the institute's technical pamphlets:

"Oil paints and other impermeable coatings have sometimes been used as waterproofers, but chances are the results will be unsatisfactory if they, or any nonporous coatings, are used. Unfortunately, many people as-

sume that such treatment will protect masonry walls, and that brick and tile, covered with nonporous coatings,

will be more resistant to freezing and thawing than others. In reality the converse is true. In this respect, there is an inherent danger in using salvaged brick, especially where they will be painted. Old salvaged brick usually contain many under-burned units that are particularly susceptible to disintegration.

"Because silicones are not 100 percent effective, treated masonry will still absorb some water.

'The two major classifications are water-based and solvent-based silicones, each of which can be applied by spraying or brushing. In general, solvent-based silicones penetrate better due to their small molecular structures. Water-based silicones are usually less expensive.

"Since producers of masonry silicones generally claim an effective life of five to 10 years for their products, additional applications will probably be required at five-to-10-year inter-

# Feeding your lawn before it thaws

The sooner you give your grass 'breakfast,' the faster it will revive from winter

By Millicent Taylor Garden writer of The Christian Science Monitor

As soon as you can get to it, one of the best things you can do for your home place is to serve your lawn a hearty breakfast in bed. Even if the soil is still frozen or there is some snow on the ground, you can offer it a good meal.

It won't be long now, even in the colder regions, before the grass plants will be waking up, beginning active growth, and they will appreciate the food you have provided. In lawn this spring, feed it.

Choose a day without wind and if possible a day when the weatherman hopefully predicts a warming trend in the offing. Plant food on top of the snow will gradually seep down around the roots of the grass plants, or a rain will soon do the trick.

### Rake gently

Before you get out the spreader go over the lawn gently with a grass or "broom" rake to clear the surface of debris such as matted leaves, twigs, paper, and stray branches. There is no need, however, to rake out dead weeds. They will soon decompose.

If you had crabgrass (and who didn't!) your lawn's breakfast menu might be a combination lawn fertilizer and crabgrass preventer. This should discourage last fall's crabgrass seed from germinating and keep your lawn free of this aggressive villain all season.

As soon as you can, run a lawn mower around, set high, so it cuts off about one-half inch of the browned winter grass tips. This will enable the early spring sunshine to reach the crowns of the grass plants and greening will occur sooner.

As greenup increases you may locate bare or thin spots. Scratch these up with a steel rake or hand fork to loosen the surface of the soil and plant grass seed. Serious bare spots should be dug out and fresh soil and plant food worked in and planted. Cover the seeded spots with wet burlap, peat moss, or sifted soil, and protect them from being tramped upon with stakes or light brush.

### Don't worry about freeze

The likelihood of cold weather, seeding of either the thin or bare spots or the entire lawn. Actually alternate freezing and thawing, melting snow, or soaking rain will help bury the seed. An exception is a sloping terrain, where the seed may be washed away before it can find a way into the small soil cracks.

In some regions homeowners think they must roll their lawns every spring or when they have seeded it. Actually, lawn rolling may be harmful. Rolling to flatten places heaved up by frost may not be damaging to sandy or light soils, but can definitely be harmful to loam and clay soils.

Unless the soil is quite dry the rolling will puddle and compact the soil. Never roll, say the experts, when the soil is so wet you leave footprints and water seeps into them. If you feel you must firm frost-heaved grass roots into the soil use a light roller.

### Where to roll

Rolling is little use in pressing seed into the soil on an established lawn, for the turf keeps a roller of a proper weight from contract with the soil. It is, however, advisable to make a light rolling after seeding newly prepared ground to press the soil around the seed to hasten germination.

Similarly, when a bad bare spot has been dug three or four inches deep and fresh soil and plant food worked in, and seeded, the seed can be pressed into the soil with a light tamping. If you are buying a new spreader

for this and other spring garden work you might like to know that the Scotts people now have a stainless stee. spreader. You probably have been exasperated in the past over the way spreaders rust no matter how you try o clean them after each job. steel in the world, why do we have to

With all the plastic and stainless struggle with that problem, you have wailed. So Scotts for one-and maybe others by now - came up with a stainless steel spreader. The design is the same as the earlier kind, which spreads when you walk and stops when you stop and raise the handle.

### For ease of care

If you need a new spreader - and a spreader is practically a "must" for every homeowner — look for a stainless steel one, easier to take care of and longer lasting. Usually they cost less if you buy a bag of lawn product at the same time. There is also on the market, for

small jobs, a hand spreader made of heavy plastic by the Ortho people. Called a Whirlibird, it enables one to sift plant food onto spots, along a plant row, and in all sorts of places where a spreader cannot go. I haven't used mine yet, but the

gardening friend who told me about it says it is a most handy piece of equipment for certain kinds of amall

scandal." Rule 394 prohibits members of the NYSE from going outside the exchange to the third market to execute trades unless exchange permission is granted.

Mr. Weeden sees it as basically a boycott of the third market.

### Harmonious atmosphere

Though Mr. Weeden often is involved in outside conflict, the firm's internal working atmosphere is remarkably harmonious.

Says one of Mr. Weeden's colleagues: "This is one of the closest things to a democracy you can find in a brokerage house. You may not get to vote on something, but at least you get to voice an opinion."

When the market tumbled last year and Mr. Weeden began to lose money, he instituted layoffs and cutbacks as did other brokerage houses.

Yet the cuts came all at once, and the people who remained are coming into the office earlier and leaving later to pick up the slack.

With the return of high-volume days and a bond market Mr. Weeden expects his firm to rise into the black again for fiscal 1975.

### Run for Congress

When he isn't in Washington getting involved in politics (Mr. Weeden ran for Congress in Manhattan in 1968), or helping to run the day-to-day affairs at Weeden & Co., Mr. Weeden lives in a co-op on fashionable Park Avenue. For the record, however, he says he has driven only Volkswagens and a Toyota station wagon. He needs the wagon to cart around his five children. To relax, he plays squash, reads, and is building a home in Connecticut.

### Correction

A chart on this page Thursday detailing savings under two incometax-reduction plans contained two errors. For a family of four with a \$5.000 taxable income; President Ford's permanent tax-reduction proposals would save \$178 rather than none: while a House Ways and Means Committee bill would save \$198 rather than \$178.

### Greenspan overrode them

# 2 Ford economic advisers leaving

Special to. The Christian Science Monitor

Washington Before the end of March, two members of the President's Council of Economic Advisers will be gone. The chairman, Alan Greenspan, is already leading the search among academic economists for replacements.

Gary Seevers, an agricultural economist, will become the first chairman of the Commodity Futures Trading Commission, a new five-member board established last year to tighten regulation of the nation's commodity exchanges. President Ford is expected to announce his appointment when the routine background checks are completed. Mr. Seevers will leave the CEA before the end of March and must be confirmed by the Senate in his new post . .

The other CEA member, William Fellner, a Yale professor emeritus, will return to the American Einterprise Institute in Washington, where he will again become a scholar-inresidence. He leaves the CEA at the end of this week.

### Unhappy with roles

Neither Mr. Fellner nor Mr. Seevers had a large role in the many weeks of debate during December and January in which Mr. Ford's new economic policy was decided. While neither is resigning out of pique, both men were unhappy at not having a larger role.

In fact, quite a few of the council's 20 staff economists are less than pleased with the CEA's role in those policymaking debates and with the policy that was adopted.

In general, the staff has wanted more stimulus applied to the slumping economy than Mr. Greenspan has thought wise, given the still high level of inflation. They, therefore, have applauded moves in Congress to go beyond the \$16 billion tax cut proposed by Mr. Ford, and in particular, to make a sizable portion of it permanent. It was the decision to ask only for temporary cuts that worried them the most.

### Proposals trimmed

After long and heated discussions within the CEA, Mr. Greenspan agreed to urge the President to propose larger and more permanent tax cuts than Mr. Ford ultimately accepted. At the meetings in Vail, Colo., late in December, the CEA proposals were trimmed back.

Early in January, however, more and more information about the precipitous drop in the economy began to reach the economists' desks, and they began revising downward their estimates of how well the output of goods and services would hold up during 1975 and 1976. The failure to include in their opinion, limited the pace of the recovery that could be expected in

The President unveiled his new plan in his State of the Union message and released a set of budget estimates that the CEA economists felt already were outdated. Between the time of the speech in the middle of the month and the budget release on Feb. 1, an intense struggle took place over whether the official budget estimates should be revised in light of the worsened outlook.

### Revisions argued

Several of Mr. Ford's economic advisers argued against the revisions, which produced a political storm when they finally became public. They were contained in a table of economic projections covering the next five years included in the budget, and they showed that unemployment, for instance, would remain above 71/2 percent for three years.

Some of the advisers had wanted the table dropped entirely, but it remained in, partly because of promises to members of the new House and Senate budget committees that it would be published.

The final budget numbers never did reflect fully the revisions the CEA staff thought should have been made.

Mr. Greenspan redeemed himself in the eyes of his staff by insisting that the new projections be included in the budget and that they reflect the new

Mr. Greenspan and Federal Reserve Board Chairman Arthur F. Burns both believe things could turn out much better than the projections imply. Both say a boost in the confidence of both consumers and businessmen could produce a much swifter recovery, and that that factor cannot be captured in the econometric models, such as those on which the projections were based.

The CEA staff, on the other hand, would rather put its faith in more stimulus, a bigger and more permanent tax cut by Congress, and a faster expansion of credit by the Fed.

### Reagan papers go to Hoover archive

By the Associated Press

Stanford, Calif. Ronald Reagan will give about 25 tons of gubernatorial and personal papers to the Hoover Institution, the largest private archive in the United

Hoover director W. Glenn Campbell also said that Mr. Reagan, twice governor of California, will become an honorary fellow on its staff.

Mr. Campbell said 1,700 boxes, including minutes of cabinet meetings, correspondence, speech drafts, personal notes, legislative drafts, and campaign documents will be moved in February from Sacramento to Stanford University, where the institution is located.

## Late income-tax law changes

By a business-financial correspondent of The Christian Science Monitor

Washington

To avoid overpaying their taxes, the majority of U.S. citizens who prepare their own federal tax returns often rely on Internal Revenue Service (IRS) instruction booklets But since changes in tax law occur after the IRS sends its

instructions to press, unassisted taxpayers may overpay because they relied on out-of-date information. However the IRS recently has issued the 1975 edition of its

Publication 553, "Highlights of 1974 Changes in the Tax Law." The four-page publication is available at local IRS offices. Here are some of the most significant changes detailed in the

booklet: • Interest deductions: individuals may now deduct from gross income any interest they lost by making an early withdrawal from a savings account which required funds to be left on deposit for a

specified period. itemized deductions on Schedule A, Form 1040.

 Mileage rates: taxpayers who use their cars in moving, visiting a health-care professional, or in charitable work have had the amount they may deduct per mile traveled increased to 7 cents.

• Retirement asvings: Beginning in 1975, individuals who are not covered by a government qualified pension plan may make tax deductible contributions to a retirement savings program. Contributions are limited to 15 percent of earned income up to \$1,500. Individual W-2 forms indicate if an employer offers a qualified pension plan.

# 'Jog Rummage' mixes fantasy and realism

Jog Rummage, by Grahame Wright. New York: Random House. \$5.95. By Victor Howes

"Jog Rummage" is a tale of three cities - one real and two imagined. The real city is London, modern London, and is inhabited by Elizabeth, a schoolgirl, her father, a newspaper vendor with a past he will only partially reveal to his questioning daughter, and a supporting cast of

The imaginary cities are inhabited by Jogs, i.e., spiny hedgehogs, and Rats, i.e., rats. The Jogs are warriors

and foragers, whose warehouses bulge with foodstuffs and drygoods. The Rats are pirates and marauders, seafarers who ferry themselves across the river Altos, to steal sweetrock, sour-rock, mustard, fibres, wax and weapons from the storehouses of

Rats and Jogs live in common fear of their air-borne enemies the Swoops, And humans, Humans so remote they have never seen one until the child Elizabeth stumbles upon their underground habitat. She is so huge her shoulders and face are lost in the shadows beyond Jog vision, and the only name they can suit to her is

Elizabeth-Horribilis has left her city - London - to scuttle down a narrow hole into theirs, actually an underground factory. There she finds the clues to her father's past, and his buried secret; a secret which brings her closer to him and helps her to grow in wisdom and sympathy.

But inadvertently her underground quest results in the destruction of the

Neil Simon's 'Prisoner'

fails despite fine stars

twin cities of Jog and Rat. Clearly Grahame Wright is talking about incommensurables. Jogs can never understand humans. Humans can never understand Jogs. But his novel makes curious reading, as if Alice had wandered through Wonderland nelther seeing nor recognizing the White Rabbit, the Mad Hatter, the Cheshire

Cat.
"Jog Rummage" is British author Wright's first novel. It asks us to perceive Wonderland through divided eyes. Jogs and Rats are quaint, home-and-comfort-loving. Also repellent, fearful, ugly. A similar dichotomy applies for humans.

It is an experiment that almost works. The problem is that the fantasy world - a world of talking hedgehogs and rats with names like Rummage, Geovard, Snug, and Scratcher, who live in cozy cottages, eating mushrooms and beetle-broth and drinking Mossbrew\Vintage V, and who scuttle nervously through the Marble Halls of Meltamor, Emperor of all the Rats - is too fragile to be pitted against modern London - a city of bulldozers, demolition, drugpushers, petty crime, and assorted social injustices.

The real world trivializes the fantasy world. The ingredients don't blend, and we are left wishing Grahame Wright had written two novels, one fanciful, one naturalistic, and had bound them in separate covers. As it is, he has not found a myth compelling enough to unite his worlds, or an allegory clear enough to make their juxtaposition meaningful.

Victor Howes is a poet, critic, essayist, and professor of English at Northeastern University.

# British in New York: a memorable month

### Royal Shakespeare and Maggie Smith top latest arrivals

By John Beaufort

New York

Those extraordinary British actors have done it again. From Brooklyn to Broadway, they are giving performances rich in artistry and alive with the kind of theatrical excitement that sets audiences cheering. With the arrivals of the Royal Shakespeare Company in a small repertory of classics and of Maggie Smith and John Standing in Noel Coward's "Private Lives," February is proving a

The Royal Shakespeareans opened their stand at the Brooklyn Academy of Music with the Jeremy Brooks-Kitty Black version of Maxim Gorky's Summerfolk. It is a lengthy, seething, complex, yet fascinating study of

### Theater

month to remember.

Russia's doomed bourgeoisie in 1904. In this leisurely socio-psychological study, Gorky inspects and dissects his clutch of idlers, probes their motivations, examines their weaknesses of character, and exposes their marital rifts and extramarital dalliances.

The summer transients congregating at a rustic villa are mostly nouveau-riche, middle-class types: a lawyer, a Siberian tycoon, an engineer, two doctors, and a literary lion. The action slowly gains momentum against a background of sylvan greenery which the careless pleasure seekers litter and pollute as they play their petty and spiteful games, struggling to escape the frustration and boredom of their own futility. Gorky harshly indicts most of these summerfolk, while observing a few of them with compassion and even admiration.

The R.S.C. players present the unfolding counterpoint of comedy, pathos, and polemic with such clarity and truthful humanity that the spectator comes to imagine himself part of a shared confidence. It would be impossible in a short space to do justice to all the histrionic splendors of the memorable production directed by David Jones. Among the admirable performances in principal roles are those of Norman Rodway, Estelle Kohler, Mike Gwylim, Margaret Tyzack, Ian Richardson, Sebastian Shaw. Susan Fleetwood, Lynette Davis, Patrick Godfrey, and Jane Whiteside.

### In Brooklyn

The greening of Brooklyn continued with a lovely production of Love's Labour's Lost, acted under the verdantly arboreal canopy designed by Timothy O'Brien and Taze na Firth The comedy concerns the King of Navarre and three of his lords who swear to dedicate themselves for three years to scholarly pursuits. Scholarship surrenders to love when the Princess of France and three ladies in waiting arrive for a state visit.

Mr. Jones and his R.S.C. colleagues

actors, designers, and composer have created a glistening revival. It exults in the lyric flights, the word plays and playful words, the folkish comedy, and the swift exchanges of the civil war of words.

In addition to Shakespeare and Gorky, the Royal Shakespeare Company's repertoire for the Brooklyn sojourn includes "Lear," a shortened version of "King Lear," and "He That Plays the King," a four-person anthology of extracts from Shakespeare history plays.

### On Broadway

Private Lives has brought back two of Noel Coward's naughtiest grown-up children. Elyot Chase and Amanda Pyrnne, as dazzlingly bright as a pair of new 1920's gold sovereigns, have taken over the stage of the 46th Street Theater in a mint production directed by John Gielgud. Cavorting about two art deco sets (by John Powell) that wouldn't be caught camping, Amanda (Maggie Smith) and Elyot (John Standing) pursue their flippantly capricious way from pillow talk to pillow fight in Coward's durably funny tale of two ex-marrieds — to two other people — and promptly fall once more into love and battle.

Miss Smith's meticulously calculated Amanda is a one-woman spectacular. She can win a laugh with

the twist of a wrist, the flick of a line, or a merely devastating stare. Her beguiling nasality has reached the point where "rage" becomes "range" and "unfortunate" turns into "unforntmate." Yet the manner is more than mannerism and Miss Smith still knows effect from affectation. Her red-bobbed Amanda is attractively and commandingly companioned by Mr. Standing. Whether upright, leaning at a languid angle, or reclining, he is equally neat and debonair.

Under Sir John's direction, the comedy achieves that occasional touch of melancholy which — like the sad-sweet Coward songs along the way — wryly mocks the desperation of its determined irresponsibles. The final curtain falls as Amanda and Elyot are beating a surreptitious retreat from the now bickering Sybil and Victor (Niki Flacks and Remak Ramsay). It is the natural escape for a foolish pair of butterflies whose fate is their irrestible attraction for each

### Gazzara duo

In Hughie and Duet, Ben Gazzara portrays contrasting states of selfdeception: loneliness and lost illusions in the first instance and mental derangement in the second. The "Erie" Smith (Mr. Gazzara) of Eugene O'Neill's 1942 one-act play is a the Times Square district. Martin small-time gambler returning to a . Fried directed.

seedy hotel off Times Square after an alcoholic binge. It turns out that he is mourning Hughie, the just deceased night clerk who was probably Erie's only friend and confidant.

Fighting his solitude with endless garrulity, Erie regales the new night clerk with oft-told tall tales of his sexual conquests and gambling triumphs. It is an exercise in wishful thinking and illusion (a favorite O'Neill theme). With his cockiness and swagger-shuffle, Mr. Gazzara exposes the hollowness behind the braggadocio and thus realizes O'Neill's sardonically pitying vignette of a desperate man. Peter Maloney's colorless night clerk begins as a politely inattentive sounding board and ends as a thoroughly captured audience. Erle has at least retained his knack for spellbinding.

Apart from the opportunity it provides Mr. Gazzara for some histrionic bravura of a horrific kind, David Scott Milton's "Duet" offers little satisfaction beyond tour-de-force tricks and a slightly grand guignol climax. The duet of the title is played solo by Mr. Gazzara: alternately as the night clerk of yet another seedy hotel and the Soviet agent he luridly

imagines to be following him. Scenic designer Kurt Lundell has housed the two playlets in variants of those slummy hostelries that infest

Estelle Kohler and Ian Richardson in 'Love's Labour's Lost'

### Long Island. But Simon is no nev

comer to the suffering comic hero. The main character of "Second Avenue" is a sadly strung-out fellow named Mel Edison, who has a sort of reverse Midas touch - everything he touches turns to ash.

Not that his problems are unique. First the weather turns hot, humid, and oppressive. Then he starts quarreling with his wife and battling with his neighbors. Then he loses his job. Then he begins to lose his mind.

Though comedy is Simon's forte, much of "The Prisoner" is not meant to be funny. There's a queer pathos to poor Mel, whose brother bores him, whose wife seems to be succeeding in the business world where he failed. whose psychiatrist's favorite line is "Your time is up."

### Shallow dialogue

THE MOST ACCLAIMED MUSICAL OF 1974

Yet Simon's dramaturgical skills are not strong enough to make us really care about this man - we are held at arm's length by shallow dialogue, predictable plot twists, overblown situations. "The Prisoner" only works when it careens back to laughmaking. Which doesn't happen nearly often enough.

"The Prisoner of Second Avenue" makes a less direct stab at melodrama than Simon's "Gingerbread Lady" did, but it illustrates why Simon succeeds best when he leaves humor untampered with: Comedy, unalloyed, is what he really knows how to handle. Moreover, especially in the movies, he seems to need a strong and imaginative director to lend weight and direction to his words and characters ("The Heartbreak Kid" is more Elaine May's film than Simon's).

Melvin Frank directed "The Prisoner" shapelessly, further defusing its comic charge. Soggy music by Marvin ("The Sting") Hamlisch adds to the lassitude that creeps even over Lemmon and Miss Bancroft — whose occasional sharp moments happen in spite of, not because of, the generally hokey atmosphere.

If you want some pure-and-simple Simon chuckles, go find a revival of "Plaza Suite." Don't become a nearly-two-hour prisoner of "The Prisoner of Second Avenue."

### Houston Ballet 1975 auditions

Houston Ballet, directed by Nina Popova, will hold its Southwestern auditions for the 1975-76 season on Saturday, Feb. 22, beginning at noon in the main rehearsal hall of Jones Hall for the Performing Arts, 615 Louisiana, Houston, 77002.

Houston Ballet plans to enlarge the company and expand its season next year. It is the only professional resident ballet company in the entire Southwest, and this season toured from New Mexico to Florida.

For further information, contact Rae Delle Robbins, Houston Ballet, 2018 West Gray, Houston, Texas, 77019, (713) 524-9417.

# 'Two-hour weather marathon' tackles climate

"The Weather Machine" (PBS, Monday, 8-10 p.m., check local listings for premiere and repeats) is two hours of controlled wonderment.

You are locked in a magic weather box, bombarded with typhoons, tornadoes, blizzards, hurricanes, thunderstorm, droughts, floods, and glaciers. Just about the moment when, climate weary, you are ready to relax in the comparative peace of your own

### Television

living room, Mr. Calder scares the daylights out of you with his final conclusion: There may very well be an immediate threat of snow-blitz. What he means is, declining summer. sunshine combined with snow buildup (18 feet a year) could result in widespread icing in our own lifetime. Something to think about? This special is so full of things to think about that you may decide to watch the repeat broadcasts in your area just so you can run through it once again.

Mark Twain observed (or was it a complaint?) that everybody talks about the weather but nobody does anything about it. Well, WNET (New York) in conjunction with BBC (London), KRO (Hilversum), OECA (Toronto), SR 1 (Stockholm) and ZSF

PBS's 'The Weather Machine' offers understanding, not solutions

(Mainz) have finally done something about it: They have commissioned a two-hour documentary to be written by award-winning science popularizer (UNESCO Kalinga Prize for that) Nigel Calder. "The Weather Machine" represents more than a year of research and filming all over the globe in a quest for solutions to the many mysteries of weather and the cosmic air-and-water machine, powered by the sun, that causes those mysteries.

### Not one solution

Mr. Calder has not come up with one solution: He has discovered many each with its own adherents - and all, perhaps, a bit confusing for the layman. But he includes so much fascinating footage - the birth of a tornado, the typhoon-detecting Mt. Fuji weather station, the strange Peruvian Christmas-time current, the Senegal drought, the Arctic ice cap that, by the time this two-hour weather marathon ends, you feel you have been drenched by an unending torrent of fabulous information. But. as in any rainy climate, you're left with a lot of soggy clothing to sort and dry out.

One of Mr. Calder's major difficulties in dealing with the huge mass of information he accumulated is the tact that so much of it is conflicting. One authority says that there have been 20 ice ages in the last two million years ... and another is due at anytime. Another expert predicts that before we have another great ice age, we are due for a period of even more moderate climate perhaps even

drought. Still another is predicting a little ice age almost immediately. Then there are the circular arguments - is it the ocean that affects the atmosphere or vice versa? Isn't it true that everything affects everything else? Is there an answer at all? As one Swedish scientist, asked to predict future climates, sums up: "We just don't know." After all, another warns. "A bad prediction can be far worse than none at all."

### Local versions

"The Weather Machine" is being aired in the cooperating countries in local versions. I find it hard to fathom why PBS decided to do it all in one 2hour special. It would have been so much easier to absorb in two or, perhaps, even four, segments. It might also have been better if the producers had not tried to mimic the Dr. Bronowski ("Ascent of Man") and Lord Clark ("Civilization") method of meandering in and out of the picture - I find it just a bit incongruous to have U.S. correspondent David Prowitt continually popping over the studio horizon as he clambers around a huge synthetic globe in his desert boots.

Watching "The Weather Machine" won't enable you to solve any of the mysteries of weather but it will give you a clear understanding of why nobody else can manage that task either. If, as Mr. Calder states, everyone of us is in the front lines of mankind's battle with weather." this special — by bombarding us with such an enormous amount of aimost unabsorbable material \_ is guilty of issuing us merely manuals and mittens, rather than real weapons.

A postscript: BBC in England has published "The Weather Machine and The Threat of Ice" by Nigel Calder. It is based on BBC's version of the TV show, broadcast in England in October. According to Mr. Calder: "The book draws and enlarges upon information gathered for the program." It will be published in April in this country by Viking Press and I believe it is an invaluable aid for anybody. intrigued by the special who wishes to delve just a bit deeper into the snowblitz theory.

A small book of much density and

precision has made me think lately

about the nature of biography and,

even more, about the nature of man.

(Harcourt Brace Jovanovich) is by a

at Oxford; it deals with the way the

great Victorians wrote about each

other and, occasionally, about great

men of earlier epochs. Here is

Froude telling us about Carlyle,

Stanley about Arnold, Trevelyan

about Macaulay. These were men -

the subjects and the narrators alike

- of formidable power. They be-

lieved in the will as being capable of

determining all things. They be-

lieved in duty and forbearance, and

they often left monuments in word or

deed which seem to surpass what

would have been thought possible

within the limits of the time and

The major difference between Vic-

torian biography and that of modern

times is that the former dealt with

heroes. Nowadays almost anyone

can be written about, and much of

the time men and women don't even

wait for the biographer to come

along. They tell the story them-

selves. They don't need to have

accomplished their goals or to have

become venerable and recognized.

The fact that a man lives makes him

seem interesting to himself and

But the Victorians, who believed

strength allowed them.

presumably to others.

# A man's life

August Heckscher

tantalizing clues for the perspicacious reader. "It is not a question which can be entered into professor of 19th-century literature further": thus Margaret Oliphant wrote in 1892 about an aspect of the personal life of her kinsman Laurence Oliphant. To enter further would seem to this generation the essence of the biographer's task; yet to have entered at all is enough to reveal something important about Oliphant's character. The subject remains a hero; and the biographer has not been false to his ideal of "truth to life." It is easy to smile at the Victorians

for their apparent naivete; or even to sneer at them for their hypocrisy. But in fact they did believe that life was real (also, of course, that it was earnest); and they rendered its struggles upon the large canvas which three or more volumes of letters and papers could provide. Today there are struggles, too usually precipitated by psy-chological or by social forces. For the Victorians there was an added dimension. There is, almost always, Professor Cockshut tells us, the idea of spiritual formation by forces beyond man's control, and indeed beyond his full understanding. "Each life is felt to have a meaning, an objective meaning to which all interpretation is only a weak ap-

that each man could make himself proximation." into a hero, had little patience with those who failed to do so, or who never tried. They liked the subject of their biographies to be successful and, if possible, to be virtuous. And then with what subtlety they examined their achievements, and with what delicacy they passed over their backslidings! The latter they did not ignore completely - they dropped that we act out obscurely and which

our deeds reveal imperfectly. Arnold, perhaps the most typical of all Victorians, was never more so than in his conviction that even the most commonplace event could be a revelation and that everyday experience could contain a deeply felt meaning.

For him the return to school or a lesson on Cicero's style could harbor mystery and terror; and as often as it was repeated the meaning was reaffirmed. Arnold, we are told, 'disciplined the ecstasy.'' He tamed it and gave it staying power, so that long afterward those who had come under his spell could face life without self-pity or despair.

What we miss today - and what all the freshness and inspiration of modernity cannot make up for — is this instinctive belief that something permanent underlies the outward happenings of life. We see only the shadows; what is worse, we forget that there is a substance. As a result our men are diminished and our art is devalued. Most strikingly of all, our common life, the great arena of politics and history, degenerates into an empty hubbub.

The failure of leadership in virtually all the countries of the West today must be attributed to the loss of that Victorian conviction which once gave an inner meaning to even the pettlest parliamentary battles. It is often said that the modern world has grown too complicated to govern; the fact is that it has grown too devoid of spiritual significance. When public affairs seem no longer to be part of a great drama they can only present the kind of irrelevancy which the daily newspapers convey. Then the sense of allegory has given way to a false realism, the belief in mysterious forces to a shallow simplicity. The art of biography suffers, while the fate of democracy stands in question.

Photograph or drawing?

A patchwork of devices make "Face and Net" a cameraless work of photography and a drawing done without benefit of pen. What seems a simple sketch was tooled by Man Ray to make the visage a record of the hand and the machine. Below, the artist used wire mesh directly upon the work; above, he controlled light to scratch the whimsical Matissean line of the face.

Yet Man Ray was a photographer. In an era of experiments, Man Ray was among the most experimental; in the 1920's he produced prints by 'solarization" and became famous for his "Ravograms," a secret technique, he said at first, in which objects were placed directly on sheets of light-sensitive

paper. In art history, what an object is not counts as much as what it is. Man Ray's "Face and Net" deserve a note or footnote because they are not machine made, not a document or record of an event, not a portrait - and hence unlike the bulk of most work done with a camera, then or even now. To many photographers, his manipulation of the image removed this object far from the pure pictorial medium of photography. To many artists of the 1920s, his use of spontaneous or scientific means removed him from pure art. Now, of course, we are more tolerant of the mix.

To experimenters like Man Ray or Moholy-Nagy (who made collage images about this time), such barriers were artificial. It was an era of groping and mixed media, in the U.S. as in France or the German Bauhaus. The birth process — whether a work was handcrafted or midwifed by mechanical means - mattered little. To a man of Man Ray's wit and dadaist rejection of sobriety. it seemed high time to take the medium of photography beyond the bounds of its matter-of-fact 150-year history and to spirit art to zones beyond its even longer narrow past. So it appears in this work.

"Face and Net" 1924: By Man Ray

# "Truth to Life" by A. O. J. Cockshut

What the author calls "emblematic events" - symbols and intimations of the deeper meaning come to be very important, both in life as it is lived and as it is recreated by the biographer. Keats spoke of each man's life as being "a continual allegory": there was a truth, he seems to have been saying.

The Monitor's daily religious article

# The Truth about a lie

Whatever is not of God is not just something wrong, something to be cured; it is a lie, for there is no truth in it. It is an error, for it is not the truth of man's being. Christ Jesus identified what was not good, that is, not of God, as evil, the devil, and said, "There is no truth in him. . . . He is a liar, and the father of it." Evil is nothing.

One day a student of Christian Science was asked, "Mother, what is that on your face?" The children had noticed what appeared to be a cyst on their mother's face. "I'll tell you what it is," the mother answered. "It is nothing."

What the mother was trying to convey to her children was that they should not be taken in by the material evidence of error. The mother was praying to see only the man of God's creating. In our real being we are all this Godcreated man - spiritual, since God is divine Spirit, reflecting Him. Man is whole, perfect, and

blemish on Spirit or its creation, for matter and Spirit are opposites. They just don't mix. Anything that tries to tell us otherwise is a lie. Since God is all good and created only good, He did not make a lie or error in whatever form it tries to appear. The truth about a lie is that it is nothing, and we do not have to accept it or put up with it. Jesus never did. He healed by knowing the truth of spiritual being. He said, "Ye shall know the truth, and the truth shall make you free."2

Within a short time after the mother's conversation with her children (during which time she was knowing the truth by continuing to pray to see herself as God created her, which included seeing the nothingness of error of any kind), the growth disappeared, and the healing has been permanent.

The Discoverer and Founder of Christian Science, Mary Baker Eddy, writes in the Christian Sci-

flawless. There is no trace of a ence textbook, "The nothingness of nothing is plain; but we need to understand that error is nothing, and that its nothingness is not saved, but must be demonstrated in order to prove the somethingness - yea, the allness - of Truth." Further on down the page we read, "Disbelief in error destroys error, and leads to the discernment of Truth."3

If error were something, knowing the true facts of man's being would do nothing, but since error is nothing, the true fact that man is a spiritual idea of God removes the error from our consciousness - and also the manifestation of the error from our body, since what we think is delineated upon the body.

Knowing the truth, we shall be free. This is Christ Jesus' promise to us all.

'John 8:44; 'v. 32; 'Science and Health with Key to the Scriptures, p. 346.

[This is a French translation of today's religious article]

# Traduction de l'article refigiant permiseant en arginis sur cette page (Une traduction française est publiée chaque semaine) La vérité au sujet d'un mensonge

Tout ce qui n'est pas de Dieu mensonge. Puisque Dieu est tout n'est pas simplement quelque chose de faux, quelque chose qui doit être guéri ; c'est un mensonge, car il ne contient pas de vérité. C'estune erreur, car ce n'est pas la vérité de l'être de l'homme. Christ Jésus identifia ce qui n'était pas bon, c'est-à-dire ce qui n'était pas de Dieu, en tant que le mal, le diable, et il dit : Il ne se tient pas dans la vérité... il est menteur et le père du mensonge. » Le mal n'est

Un jour la question suivante fut posée à une étudiante de la Science Chrétienne : « Maman, qu'as-tu sur la figure ? » Les enfants avaient remarqué que leur mère avait sur la figure ce qui semblait être un kyste. « Je vous dirai ce que c'est, répondit la mère, ce n'est rien. >

Ce que la mère essayait de faire comprendre à ses enfants, c'était qu'ils ne devaient pas se laisser duper par l'évidence matérielle de l'erreur. La mère priait afin de voir seulement l'homme que Dieu a créé. Dans notre être réel nous sommes tous cet homme créé par Dieu — spirituel, puisque Dieu est Esprit divin, Le reflétant. L'homme est sain, parfait et sans tache. Il n'y a aucune trace de souillure sur l'Esprit ou sa création, puisque la matière et l'Esprit sont des opposés. Ils ne peuvent tout simplement pas se mélanger. Tout ce qui essaie de nous dire le contraire est un

bien et qu'Il créa le bien seulement, Il ne fit pas de mensonge ou d'erreur sous quelque forme qu'ils essaient de se présenter. La vérité au sujet d'un mensonge est qu'il n'est rien, et nous n'avons pas à l'accepter ou à le supporter. Jésus ne le fit jamais. Il guérissait en sachant la vérité de l'être spirituel. Il dit : « Vous connaîtrez la vérité, et la vérité vous affranchira. » 2

Peu de temps après la conversation que cette mère eut avec ses enfants (pendant ce temps elle avait affirmé la vérité en continuant à prier pour se voir comme Dieu l'avait créée, ce qui comportait la compréhension du néant de l'erreur de toute sorte), la grosseur disparut et la guérison s'est avérée permanente.

Le Découvreur et Fondateur de la Science Chrétienne, Mary Baker Eddy, écrit dans le livre d'étude de la Science Chrétienne : « Il est clair que le néant n'est rien, mais il nous faut comprendre que l'erreur n'est rien et due son neant n'est bas sauvé, mais qu'on doit en démontrer le non-être afin de prouver la réalité - savoir, la totalité - de la Vérité. » Et plus bas sur la même page, nous lisons : « Le fait de ne plus croire à l'erreur détruit l'erreur et mène au discernement de la

Si l'erreur était quelque chose,

nous n'accomplirions rien en sachant

# Die Wahrheit über eine Lüge

[This is a German translation of today's religious article]

Alles, was nicht von Gott kommt, ist nicht bloß etwas Falsches, etwas, was geheilt werden muß; es ist eine Lüge, denn es ist keine Wahrheit darin, Es ist ein Irrtum, denn es ist nicht die Wahrheit über das Sein des Menschen. Christus Jesus bezeichnete das, was nicht gut, d.h. nicht von Gott war, als das Böse, den Teufel, und sagte: "Die Wahrheit ist nicht in ihm . . . er ist ein Bügner und der Vater der Lüge."1 Das Böse ist nichts.

Eine Christliche Wissenschafterin wurde einmal gefragt: "Mutter, was ist das in deinem Gesicht?" Die Kinder hatten etwas wie eine Zyste im Gesicht ihrer Mutter bemerkt. "Ich will euch sagen, was es ist". antwortete die Mutter, "es ist nichts."

Was die Mutter ihren Kindern beibringen wollte, war, daß sie sich nicht von dem materiellen Augenschein des Irrtums täuschen lassen sollten. Die Mutter betete, daß sie nur den von Gott geschaffenen Menschen sehen möge. In unserem wirklichen Sein ist jeder von uns dieser von Gott erschaffene Mensch - geistig, denn Gott ist göttlicher Geist, und wir alle spiegeln Ihn wider. Der Mensch ist vollständig, vollkommen und makellos. Geist oder seine Schöpfung weist keine Spur einer Entstellung auf, denn Materie und Geist sind Gegensätze. Sie können sich einfach nicht vermischen. Alles, was uns etwas Gegenteiliges zù erzählen versucht, ist eine Lüge. Da Gott alles Gute ist und nur Gutes erschaffen hat. hat Er keine Lüge und keinen Irrtum gemacht, in welcher Form sie auch zu erscheinen versuchen. Die Wahrheit über eine Lüge ist, daß sie nichts ist, und wir brauchen sie nicht anzunehmen noch uns mit Ihr abzufinden. Jesus tat dies niemals. Er heilte, indem er die Wahrheit über das geistige Sein wußte. Er sagte: "[Ihr] werdet die Wahrheit erkennen, und die Wahrheit wird euch frei machen." 2

Bald nach dem Gespräch der Mutter mit ihren Kindern (in der Zwischenzeit hatte sie an der Wahrheit festgehalten und gebetet, daß sie sich so sehen möge, wie Gott sie geschaffen hat, was auch bedeutete, die Nichtsheit des Irrtums jeder Art zu sehen) verschwand die Zyste, und die Heilung war von

Die Entdeckerin und Gründerin der Christlichen Wissenschaft\*, Mary Baker Eddy, schreibt im Lehrbuch der Christlichen Wissenschaft: "Die Nichtsheit von nichts ist klar; wir müssen aber verstehen, daß der Irrtum nichts ist und daß seine Nichtsheit nicht errettet werden, sondern demonstriert werden muß, um die Etwasheit - ja, die Allheit — der Wahrheit zu beweisen." Weiter unten auf derselben Seite lesen wir: "Das Nicht-Annehmen von Irrtum zerstört den Irrtum und führt zur Erkenntnis der Wahrheit." 3

Wenn der Irrtum etwas wäre, würde es nichts nützen, die wahren Tatsachen in bezug auf das Sein des Menschen zu erkennen, aber da der Irrtum nichts ist, entfernt die wahre Tatsache, daß der Mensch eine geistige Idee Gottes ist, den Irrtum aus unserem Bewußtsein und die Kundwerdung des Irrtums an unserem Körper, da ja das, was wir denken, sich auf dem Körper abzeichnet.

Das Erkennen der Wahrheit wird uns frei machen. Dies ist Christi Jesu Verheißung für uns alle.

# way of healing

The Bible speaks of the great love and compassion that moved Jesus when he healed. In his ministry he turned the thought of those seeking healing to a fuller understanding of God's love and goodness.

In a deep, prayerful search of the Bible, Mary Baker Eddy discovered that Jesus' teaching and healing were scientific. She learned that health, freedom, and abundance are the natural and provable effects of God's overflowing goodwill for His children.

After proving this in her own healing work, she taught others how they could be healed by spiritual means alone. She explains this method of Christian healing in her book Science and Health with Key to the Scriptures. A careful study of its message can give you the clear understanding of God that heals. You can obtain a copy with the coupon below.

Arnold Crane

Nobody is cutting any ice

About a hundred years ago, a gentleman who grew watercresses for market and irrigated them from a stream went to court. He asked that another gentleman, just upstream, be enjoined from flowing the wash from his gravel pit to cause pollution which injured the watercresses. The justice, one Wood, held that the defendant had as much right to use the stream for drainage as the plaintiff for growing watercresses, and injunction was denied. (Weeks v. Howard, 10 W.R. 557.) I stumbled upon this landmark

decision when I was looking up water rights with the idea of ex-

### Dispatch from the farm

pounding on cutting ice. Rights and nonrights in public and private waters have caused much brain grinding by our courts, and I was wondering if a chap might go and cut his own ice today just as one did a century ago. Seemingly, he may. The privilege of gathering ice upon waters that are public property is a common right. Our basic judicial attitude derives from the Great Ponds Law of Massachusetts, which prevails in Maine provincially, and any body of water over ten acres is public. Subject to the whereases and notwithstandings of judicial review (as with watercresses, supra), any citizen may proceed to any ten-acre body of water and cut ice.

Our great national shortage crisis

John Gould in all directions suggests we are missing a great opportunity. As far

as I know, nobody is cutting any ice, and the ponds of Maine offer unlimited supply at this time. There isn't much to it. You begin by surveying, marking, and staking the area of ice you propose to harvest, and this establishes "appropriation." You mustn't encroach on somebody already appropriated. I notice decisions have upheld this as far away as Kansas and Missouri. Then you punch a hole in the ice and insert a special tool in the saw category, and you hump it up and down until you have cut a kerf as far as you wish to go. This kerf is followed by a second, parallel by two feet, and you remove the long strip cake by cake. A powered chainsaw will save a lot of humping, but it will throw water like the dickens and is messy. When that first strip is removed, the rest is

easy. Just take all you want. It is true that the best ice is made by the coldest weather, but harvesting ice is a warmish job even at -80 and 40. After you've humped the saw, and lifted, pushed, pulled, tugged, and hauled cakes weighing from 300 to 500 pounds, the chill factor becomes negligible. In no time at all it's quite comfortable out

there. I note another excellent decision. If you make a mistake, and get onto a private pond, there's no great problem. The measure of damages for wrongful taking of ice from another's waters is the value of the

ice when converted to a chattel. (Washington Ice Company v. Shortall. etc.) So if you just apologize and give the man fifty cents he'll quiet down. It would take a tanker of Arabian eil to deliver the BTUs you've assimilated by cutting fifty cents' worth of illicit ice. You can't

This proposal is by no means whimsical. All our national problems might be taken care of by a mass decision to cut next season's ice. Sheepmen would become prosperous as mittens are needed. The building trades, now in the doldrums, would spring into affluence as everybody put up an ice house. Electric refrigerators and freezers would be turned off, and the power generators could be run on half time to save untold barrels of oil. This, in turn, would spare us gasoline rationing and increased prices, and with fuel again plentiful the depressed automobile industry would leap to new heights of production. But best of all, getting our sedentary population out into the open air, and active, would make everybody pinkcheeked and ravenous, and the food industry would be obliged to adjust accordingly. There's no limit to what a big ice harvest might do for us all. And, once perceptions are broadened by public understanding of how simple it is to nurture prosperity, we could expect sympathetic attitudes toward ecological solutions,a nd that poor chap downstream might go back to growing watercresses.

The old logrollers

# Fuel: creative compromise

The Senate vote to suspend President Ford's oil tariff hike for 90 days has brought U.S. energy policy to the point where creative compromise is both likely and

It is conceivable that Mr. Ford might yet persuade two or three more senators to his side, to sustain his threatened veto. His aides are suggesting concessions such as tilting the impact of the tariff more heavily onto gasoline than heating oil, stretching out the timetable for posting the oil import tax hikes, or lowering its target of cutting consumption by a million barrels a day.

Also, there is negotiating material in offers of tax credits or rebates for farmers and airlines, or in the larger energy tax mix which involves oil depletion allowances, aid to utilities, and the like.

But these compromises do not have to be made with the President's plan as the vehicle. Congress could decide, as its majorities in both houses have shown themselves inclined by voting to postpone the oil tariff hike, that a gradualist approach to energy conservation should be taken. The major objections to the Ford oil tariff approach are that it would add two or three percentage points to inflation and jolt the economy when it is already in recession. A congressional alternative plan would likely include a nominal gasoline tax whose revenues would be redeployed in developing other energy resources and mass

transit. Congress says it can produce such a plan by April. This may not meet Mr. Ford's insistence that Congress put up an alternative to his plan right now. But it is

Abortion and the law

The nationally publicized Bos-

ton trial of Dr. Kenneth Edelin

illustrates the legal confusion and

emotional tumult that can be gen-

erated around the abortion ques-

tion. The fundamental way out of

such turmoil is a radical one: not

only to clarify the law but to

attack the contributing causes of

abortion itself - ignorance, pov-

Here is where family, school,

erty, immorality, disease.

consistent with the complexity of the task and the deliberateness it demands.

As it is, Congress - and more specifically the House Ways and Means Committee - acted correctly and swiftly in writing a \$21 billion tax cut alternative to the antirecession half of the President's economic plan. Only with that out of the way could the committee take up the energy tax issue. Mr. Ford had agreed to the splitting of the antirecession and energy programs, and he cannot fairly at this point accuse Congress of undue delay.

The President can with justification claim, however, that whether his oil tariff plan prevails or not he has crowded Congress into the fastest possible action.

Mr. Ford may yet attempt the confrontation route to have his threatened veto sustained. But the energy picture has already shifted since his plan was proposed. A glut of oil is building on world markets. Energy use growth rates are down. The impending meeting between OPEC and oil-importing nations could produce results. Haste might prove unwise.

The most telling argument against the White House trying to ram its oil tariff plan through Congress via a veto fight is this: the President's plan would then have the backing of only a third of the members of Congress. This is scarcely an endorsement, hardly the kind of base on which to build an energy program designed to last until 1985.

Again, the moment seems ripe for the kind of creative compromise that will suit the needs of the White House, Congress, and, most of all, the public.

# Brooklyn boy advises Czar Zarb

Washington Energy chief Frank Zarb, from Brooklyn, told a friendly group of us the other morning, rather wistfully. that he couldn't find his opposite number to negotiate with in Congress. He didn't put it quite that way, but he was obviously frustrated and a bit

He feels there is desperate need to work out an official position for dealing with the petroleum cartel as fast as possible. But when he goes up to Congress he finds himself at a loss. The administration will compromise on the oil program, he indicates. Its position is not unyleiding. In his financial experience in New York, he savs, there was always somebody you could trade with. But in Congress (and Czar Zarb from Flatbush

shrugs) you just can't find the man. Now Mr. Zarb, I am an old Flatbush boy myself, and I will explain things. to you. I want to be helpful. You are not the only newcomer who has seemed upset. In fact, as far back as I can remember, there is this bewilderment of practical men when they come to Washington.

Mostly they are businessmen unfamiliar with government. Sometimes it seems to me that President Ford is surrounded by such people in his three-fold crisis — Treasury Secretary William Simon on taxes, top economist Alan Greenspan on the recession, and you on energy. Secretary Kissinger occasionally is a little surprised, too. President Ford, of course, has had enough experience for everybody.

The answer, I think, to your question as to who the man is to deal with: There isn't any such man. There are a dozen, probably a score, of committees in Congress involved with energy. Rep. Richard Bolling (D) of Missouri tried to get it all lumped in a single committee in his reorganization program last year. He wasn't successful, though he did get some admirable changes. In the British

importance to you have all won seats in Parliament and so, by definition, know their political way around. Prime Minister Harold Wilson's 1966 Cabinet, I find, had no less than 99 "ministers" in the House of Commons, and from these he picked his policy-making body, or "Cabinet," of 20 or so. (Aside from Interior Secretary Rogers Morton there's hardly anybody in the Ford Cabinet who ever got elected to anything.)

The American system, as you know, operates differently from the British: It was invented in 1787 and designed to prevent a usurper, with the President guarding us against Congress, Congress guarding us against the President, and the Supreme Court guarding us against everybody. It has worked pretty well, too - but it is slow. "This self-stultifying, divisive system of government indeed sometimes produces no movement or action at all," writes a recent English analyst, S. B. Finer, University of Manchester ("Comparative Government," 1970).

Professor Finer adds nevertheless that, for a country so rich and potent as the U.S., "no action for a very long time is not only tolerable but often even agreeable.'

Maybe that was true a few years ago, but things move at such a breakneck speed today that a government stalemate is intolerable.

Anyway, the picture of Czar Zarb searching Capitol Hill for some key man to deal with will long haunt me. Mr. Zarb is deeply in earnest. He and Greenspan and Simon and Kissinger seem to testify every other day. Congress is trying to reassert authority, on taxes, on the economy, on energy, and on other assorted crises. A President of one party confronts a Congress of another. Europeans can't understand the arrangement.

Fortunately there is little personal bitterness in the encounter; Mr. Ford likes Congress and Congress likes Mr. Ford. Where we shall all come out in this extraordinary adventure is hard

contemptuous, I thought.

system, Cabinet members of equal

### Repaying society—but not from jail

The notion of putting some people to work in constructive community service rather than putting them behind bars makes sense because of its potential economic and social ben-

A program known as court referral - the court refers or sentences a defendant to work for a volunteer agency - should appeal to toughminded law-and-order advocates as well as to those who argue that incarceration, especially for lesser offenders, does not result in rehabili-

By keeping people out of jail, the taxpayers save money. The convicted pay their debt to society by serving community agencies. Worthy programs, which invariably need workers, are provided with staff. The offenders get a chance to help others.

Court referral has been used sparingly in Southern California, mostly in misdemeanor cases. For the past eight months, Municipal Judge Éric Younger, the Los Angeles County Probation Department and area volunteer action centers and bureaus have been trying to devise guidelines

used on a more organized basis.

that would allow court referral to be

"What we're trying to do mainly is organize the court referrals already taking place here and expand the opportunity," explained Ann Roberts of the Probation Department. The effort to establish a clearinghouse of community service work opportunities would provide a ready reference for judges who wish to impose alternative sentences.

The program is necessarily limited to those who are not considered hardened criminals. People convicted of drunk driving or shoplifting, for example, if given a second chance in the form of an alternative to jail might emerge from their experience with the criminal justice system as better, law-abiding citizens.

Based on the success of court referral in Los Angeles and in other areas, where it is more formally established, the program should be encouraged. It is not a panacea, but it is a humane tool that enables the courts to decide on an individual basis whether justice is best served by sending someone to jail. - Los Ange-

# 'Clear the SST'

To The Christian Science Monitor: Roscoe Drummond's apology for the SST is a glib and illogical revision of history. Mr. Drummond's stated moral of the SST episode is, "If you want to go wrong, act first and get the facts afterward." This is an unexpected conclusion even if one accepts Drummond's premise that science has proved that the SST would have no adverse environmental impact. His moral would direct Congress in the future to act first without the facts because the crackpots who resist progress will later be proved wrong by science and thus can safely be ignored before all of the evidence is

The scientific impetus for Drummond's article, the CLAP report, itself concluded that potential harmful effects from a large increase in SSTs are conceivable. This demonstrates that the SST opponents, whom Drummond labels "extremists," had a firm scientific foundation for their beliefs about environmental hazards. The "authoritative, conclusive, and reassuring" scientific findings affirming that SSTs would not adversely affect the environment, and that new technological advances can and will negate any "future possible con-sequences," and even that monitoring programs can reduce "distant potential uncertainties" sound like the propaganda about oil spills.

The congressional action abandoning the SST was not solely based on environmental reasons. Congress assigned a low priority to spending millions of tax dollars on a fuelsquandering airplane designed to save a few hours of travel time between congested cities. Congress determined that this country did not need a multi-million dollar white elephant to maintain its prestige and production levels in the world aircraft market.

Robert E. Edmondson Reno, Nev.

To The Christian Science Monitor:
Mr. Drummond's article entitled "Scientists clear the SST" has certainly pinpointed a problem existing in Washington for some time: certain of our "instant experts" who have access to the press are making statements which have little or no basis in fact, but are merely suppositions with no solid research to back them.

One of the most brazen untruths to be foisted on the American public in a long while is the myth that burning of leaded gasoline in our cars and trucks is going to result in impending doom for all of us.

John J. McKetta, head of the chemical engineering department at the University of Texas, and a famed ecologist says: "The Environmental Protection Agency has no evidence that there has ever been a single case of death, or even illness from lead in the air coming from the burning of gasoline."

Our "big four" car manufacturers undoubtedly have many, many more highly trained engine-engineers, combustion analysts, and sophisticated pieces of exhaust analysis equipment working constantly and over a number of years, than EPA realizes exist. And yet none of these highly trained experts (in direct contrast with the pseudo, instant-experts in Washington) has sounded the alarm.

Western Germany which has some highly industrialized major cities, and also some of the highest regarded automotive engineers in the world, has not felt it either necessary or even desirable to saddle their cars for local consumption with gas-robbing devices now required by EPA for all new U.S. cars.

We wonder if EPA and those who created it, ever stop to ponder the grave consequences to our economy of letting this giant they have originated run free.

Gladwyn, Pa. Walter Sprague Batty

To The Christian Science Monito Mr. Drummond in "Scientists clear the SST" surely has missed the point. Regardless of the validity and independence of the DOT study which he reports, the point is that no such agreement on the safety of the SST was available in 1971. Reasonable and qualified scientists were apprehensive of the possible effects on the environment. With disagreement among scientists, what other choice was open to Congress than to delay action on the matter?

It seems to me that Congress did exactly what Mr. Drummond suggested that they did not - they got the facts before they acted. Now that the facts on the safety of the SST may be in, it is time to decide whether the benefits of the SST to the public do justify the expenditure of public funds on this turkey.

Carbondale, III. Jon Muller To The Christian Science Monitor:

The "Point of view" comments by Roscoe Drummond in "Scientists clear the SST" are a clear - and dangerous - reflection of a prevailing attitude toward technology and technological development.

The SST may or may not be "cleared." What is important is Mr. Drummond's obvious feeling that Congress acted to end the SST without having adequate information on the

real dangers of the SST. Mr. Drummond is arguing that our technological developments, such as the SST, should not be slowed by unproven doubts or undocumented threats. I presume he is arguing, in the case of the SST, that we should have continued with this project until we could document its environmental impact

It is this attitude toward technology which contains the seeds of our own destruction. When our technology was limited - when the impact of any development was limited - this attitude was risky but not perilous. Today - with the SST, with nuclear power plants and with many other technological efforts - the impact of a "mistake" will be documented not in some evaluation report but in an environment irreparably harmed or in a world decimated by some un-

known "impact." We cannot take that chance. We must end this notion that technology is innocent until proven guilty. We must not act until every possible safeguard has been taken, every alternative explored, and every threat dealt with. Wellesley Hills, Mass. David Gagne

To The Christian Science Monitor Roscoe Drummond's column on the SST should be read in connection with the front-page article in the same issue on noise control. His statement that the defeat of the SST program by Congress in 1971 was "principally for reasons now proved to be myths" is intemperate and very questionable.

The organization that was mainly responsible for the defeat was the Washington-based Coalition Against the SSTs. This was mainly composed of the leading environmentalist groups of the country. The question of the hypothetical pollution of the upper atmosphere was only one, and not the main one, of the effective arguments advanced by the coalition.

Of the many points made, including economic ones, the question of the noise and damage from sonic booms was the foremost. Environmentalists pointed out the great damage done in a five-month test in 1964 in Oklahoma City, in which military supersonic aircraft were used. Government figures show that over \$200,000 worth of damage claims were filed against the government. Multiplied many times across the country, this would be a staggering and continuing loss.

However, the greatest permanent damage to the environment would be from the continuing long drawn-out sonic booms — not just isolated, individual booms - across the wilderness areas of the country. With a fleet of SSTs daily flying along these paths, the peace and quiet of the wilderness - one of its greatest advantages would be irreparably shattered. I contributed an article on this subject to The Living Wilderness, organ of The Wilderness Society, in the winter 1967-68 issue, elaborating on this

theme. The Monitor article on noise control states that "the Environmental Protection Agency estimates that 16 million people are subjected to aircraft noise levels ranging from moderate to very severe." With a fleet of SSTs flying, this problem would be multiplied many times.

Carmel, Calif. C. Edward Graves

To The Christian Science Monitor:
We heartly concur with Roscoe Drummond's enthusiasm that the SST has been cleared of charges of massive environmental damage as long as certain precautions are taken during the construction of these aircraft. We heartly disagree, however, with the context in which Mr. Drummond places these reassuring facts. He seems to feel that Congress is greatly at fault for having halted construction of a plane which subsequently proved to be "safe." But it was precisely because all of the facts were not available that Congress made the wise decision to stop construction. We hope that Congress will continue to be cautious as it was in this incident in 1971. We hope, for example, that Congress will declare a moratorium on the further manufacture of aerosol sprays until all of the pertinent facts about their effect on the ozone layer are known.

Jefferson, N.H. Robert J. Tiews Jr. To The Christian Science Montter:
Mr. Drummond contends that it

Barbara B. Tiews

was up to the opposition of the SST to prove a real danger. This irresponsible approach cannot be applied to technology. Lack of environmental degradation must be scientifically shown prior to beginning any production. Our citizenry, and indeed the world populace should, through their representatives, understand the potential risks of a new venture. It is easier to turn off a project in its earliest stages than to attempt a Bradford Southworth recall. Birmingham, Mich.
